# About Us...

Videosec and LEDsec are the Hungarian regional brands of Euro Tech Corporation Kft., with a unique offer on the regional market, continuous stock, state-of-the-art technological solutions, direct product support - with more and more satisfied installer and distributor partners, awaits you to join our circle of clients.

Videosec portfolio consists of video surveillance camera and recording solutions with smart video analytics, smart building systems with LED lighting solutions and control with innovative relays and kinetic switches that are powered by the kinetic energy of the pushing of a button.

This catalogue presents our CCTV surveillance products. Analogue hybrid solutions, broad range of IP cameras that all include some level of IQ analytics (recognizing human presence), recording NVRs, access control and networking hardware.

Hybrid-light cameras can illuminate the scene in the dark with both infrared (black and white image) and high-power warm white LED diodes (full-color image). The cameras can also switch between the two lights automatically, based on human presence.

With the appropriate actuators, using the intelligence included in our CCTV cameras, you gain advanced control over lighting or other smart building controls that depend on human presence. The success of our installer and reseller partners also means success of us, thank you for choosing Videosec products every day!

the Euro Tech Corporation Kft. Team

## Control the Lighting with Camera IQ Analytics

Control the IP camera's light with human body detection

# IQ Motion Detection based on human body detection

The Videosec IQ Image Analytics recognises if human or vehicle is present in the image

The *IQ motion detection* is sending all events of recognising a human or a vehicle as motion detection event. This is compatible with any manufacturers' any recording device. Also usable for smart building control.

Hybrid light cameras' light control also works with IQ motion detection

compatible with all ONVIF-compatible recorders as a common motion detection event

this QR code opens a video that shows the setting up of IQ motion detection

VCA, smart intrusion detection, IQ image analytics	4x intrusion detection, 4x crossline detection, 4x entering/leaving area, triggering based selectively on detecting vehicle, bicycle & human presence in the scene, detecting & following over 20 targets in scene, The four zones of an alarm type can trigger to different object types. Active deterrence means, camera can play an .mp3 audio on alarm event (linked with light signalling) to speaker or audio line output.

## Video Recording, Object Search

- All NVRs handle 4K (8 Megapixel) resolution IP cameras
- HDMI output up to 4K resolution on all Videosec NVRs
  - ONVIF S, G, and T profile support, recorder access via ONVIF
  - RTSP authenticated access, live stream sending to and receiving from any system
  - IQ analytical alarm management, search by object type
  - Manage two and three independent monitors
  - NVRs connected to two independent subnets
  - PoE NVRs with support for UTP cable lengths over 200m
  - IQ-based alarms instant thumbnails listing in live view
  - Filtering of alarms for pedestrians, vehicles, license plates, ...
  - High performance, low power consumption, based on SigmaStar, Rockchip and Intel solutions
  - Instant alert push messages to mobile phone (Guard Live and Guard Viewer), live view, playback, alarm event listing

<b>power source, max consumption (W)</b>	DC 12V±25%, 18W max 12V DC 3A suggested (not included) 20°C – 35°C, indoor use only
<b>working environment</b>	windless environment
<b>weight</b>	1.55kg
<b>dimensions</b>	terminal: 420 x 220 x 65mm
<b>optional mounting stands</b>	EP-S31-W-NB floor stand EP-SZ34 desktop stand

Videosec's Presence Access and Time & Attendance system can replace attendance sheets with facial recognition and RFID reading. No more forgotten or lost ID cards, no more access with someone else's card, as long as a card+face recognition rule is applied. Frequent changes of casual employees are also easily tracked.

The employer is responsible for keeping records of working time and attendance. Our Presence system digitises this process, eliminating manual reports and paperwork. The Presence software at the heart of the system can collect data from up to 32 access units into a central register. The software provides accurate, comprehensive and transparent data on employee attendance and working hours, just as required by legislation.

You can assign your employees to departments and groups at different levels, assign shifts to them or set a flexible working time. The system automatically decides for each facial recognition whether it represents a start of work, end of work, being late, leaving early, overtime, or an exit/entry during working hours (the latter can be assigned as official or private). The same access unit can be used by both employees entering and leaving at the same time. The data can be easily transferred to payroll without additional calculations, paperwork and manual reports. The Presence software generates a spreadsheet in XLSX format for the selected period and persons. Scheduled holidays and absences can be added to the system in advance, unscheduled events can be categorised afterwards with a few clicks. The legal background in Hungary for the face recognition is regulated by the change of the Labour Code in April 2019, and a justification and a signed declaration by the employee are required.

**EP-S31-W-NB**

floor-standing mounting bracket for Presence terminal  
3x screw-locked backdoors  
2x side mounts for temp. sensor  
base plate may be screwed to concrete  
material: sheet metal  
dimensions:  
280 x 222 x 1158mm  
weight:  
6.85kg

**EP-SZ34**

desktop-standing mounting bracket for Presence terminal  
1x side mount for temp. sensor  
usable as wall mount, if mount-plate is rotated 180°  
material: sheet metal  
dimensions:  
128 x 118 x 188mm  
weight:  
0.8kg
