1. Software Introduction

1.1. Overview

VMS is latest developed client software for our products. The suppressible toolbar, succinct GUI and rich functionality make it very intelligent and user-friendly monitoring management software which can be used in various scenes.

This software could be used for connecting kinds of devices, such as DVS, DVR and so on. This introduction only presents the operation on software, if need detail function settings please refer to product specification.

1.1.1. User & privacy management

VMS support three-level organization management system, user management and

permissions management.

1.1.2. Use data interface

System data interaction use data interface, could support kinds of database flexibly, like SQL, MYSQL, XML and so on.

1.1.3. Support edit and add device by Excel table

Allows users to import or export devices using the binary files (filename extension: bin) ,much more easier in coping with the maintenance of a large batch devices. which improves system's useability and significantly reduces the workload of maintenance.

1.1.4. Smart video transmission protocol

Using the Smart video transmission protocol, the system can fully utilize the bandwidth of a network. Especially in situations when the bandwidth of the front-end network condition was limited. The system can still operates under a narrow bandwidth, without reducing the quality of the images.

1.1.5. Perfected video surveillance system

Allows the real-time surveillance and many other abilities. Such as alarm activated video record, auto-surveillance record, record playback and etc. Able to control the recording on every channel.

1.1.6. Dynamic decoding buffer adjust

The real-time surveillance is able to modify the priority setting between the video's fluency and it's real-timing with flexibility. Should the user chose to give fluency the priority, the system will provide much fluent images. Otherwise , the system will focus on providing real-time images. Thus, the system is capable of satisfying all kinds of needs.

1.1.7. Centralized management

All the data of the system is under centralized management. This allows remote users to conduct real-time surveillance and video playback via internet.

1.1.8. Fine operability

With the control authority, users can control and configure every surveillance post via client software. Also has an E-map function integrated.

1.1.9. High integration level

Other kinds of relevant information such as alarm information, voice message are also integrated in the system.

1.1.10. High reliability

There is also a fault-tolerant mechanism designed for the system, in order to keep the data intact, and to keep the system reliable.

1.1.11. Fine expansibility

Service-oriented system design, provides fine ability to expand and to adapt. Which can considerably protect user's investments.

2. Installation Instructions

2.1. Software Environment

2.1.1 Hardware

CPU:	P4/2.0G
Graphics CPU:	ATI9800 or above(two channels)
Graphics memory:	128MB or above
Graphics bus Width:	128bit

The graphics card must be able to perform hardware scaling(such as ATI and TNT2 PRO).

Network interface card: 100/1000M

Note: If devices have high resolutions or there are too many channels at the same time, in order to have a good performance, system requires much advanced hardware than we listed above.

2.1.2 Software

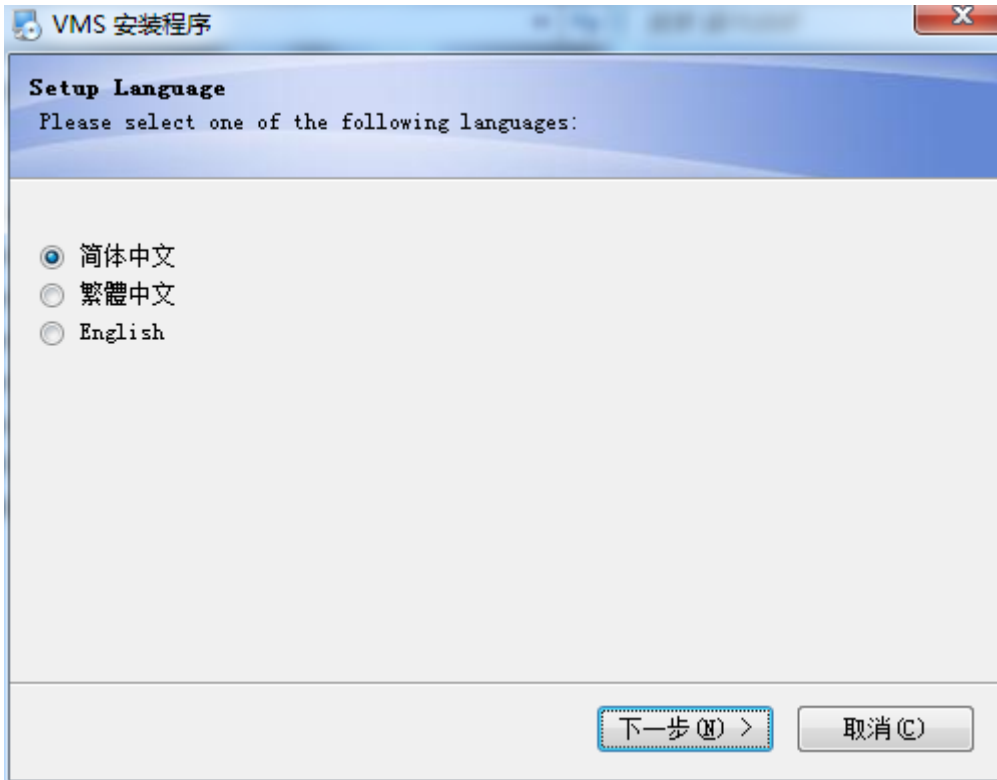

This software is compatible with windows Vista/Xp/2000/2003/7/8/10(windows 98 is not recommended)

Please shut down all activated anti-virus software and firewalls during the installation process, otherwise the device may not be detected.

2.1.3 Installation

(1) Click  to start the VMS setup sequence, select your language in the following dialog box.

(2) Then click “next” to select your installation path.

(3) Click "next" to proceed and to finish. As the picture shown below, as the installation sequence finished, appears the log in interface(you can switch it to could log in).

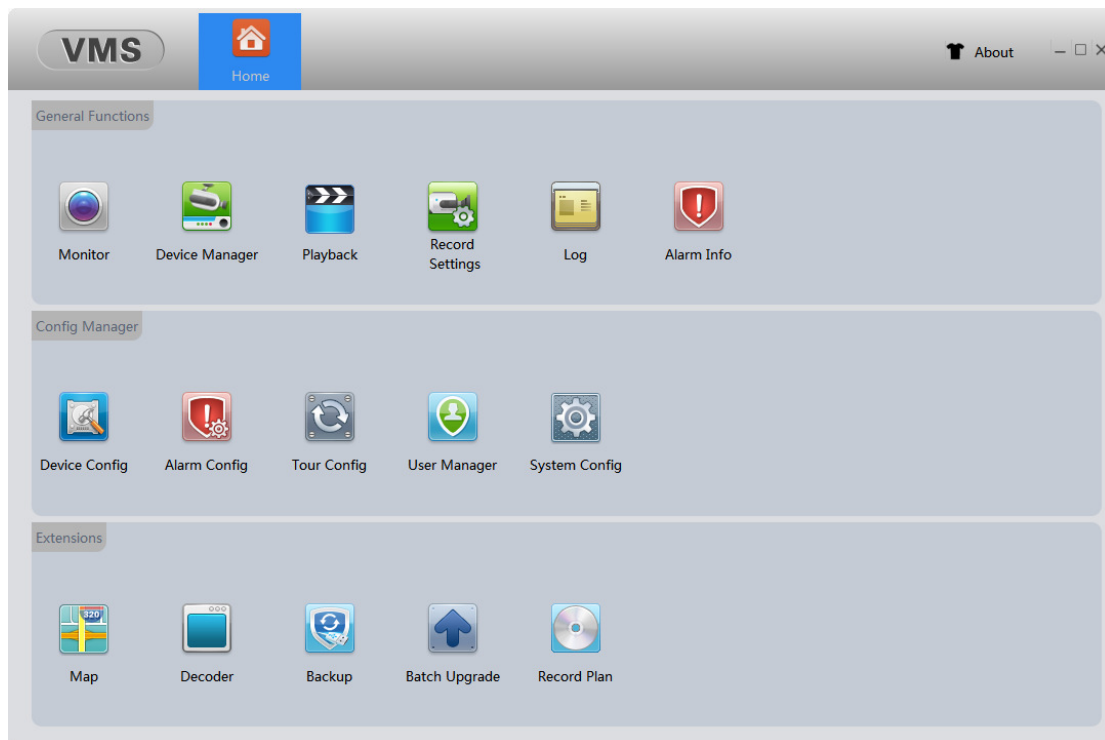

The image shows a login window titled "VMS". It contains a "UserName:" field with the text "admin" and a "Password:" field with five black dots. Below the password field is a checkbox labeled "Remember Password" which is checked. At the bottom of the window are two buttons: "Login" and "Exit".

(4) When the logging in is finished, An icon  appears on your desk top.

3. Function modules

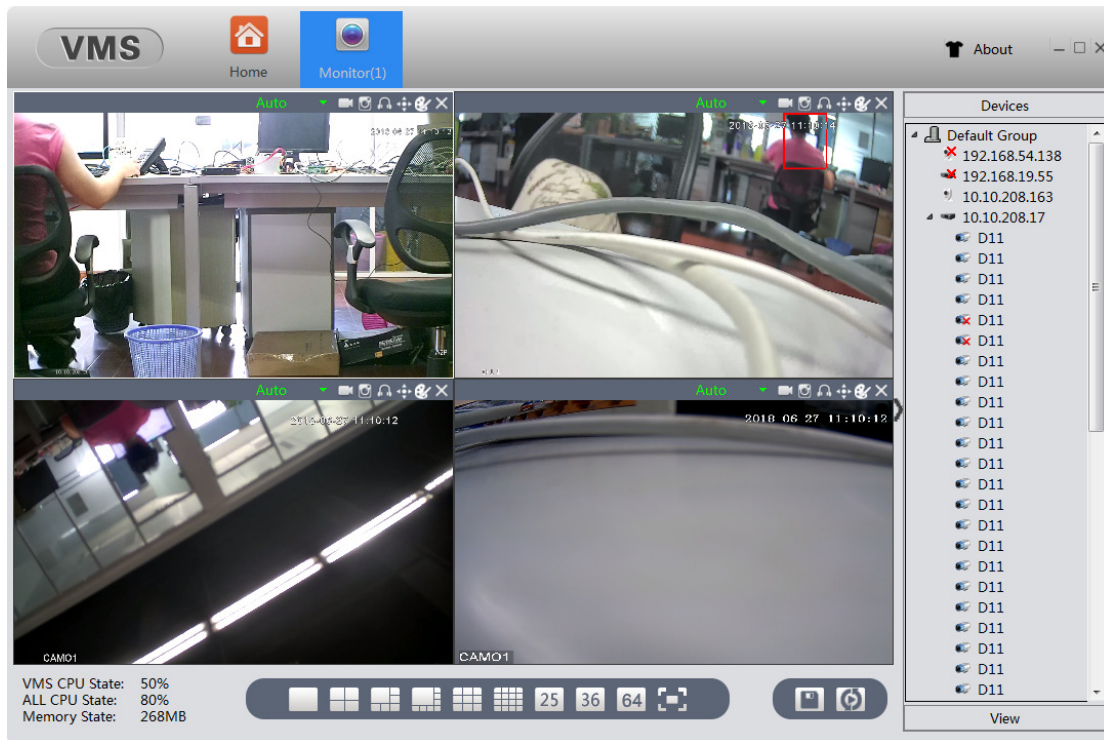

3.1. VMS home page

The home page of VMS is shown below.

3.2. Monitor

Click the “monitor” button to open the monitor page.

【Monitoring view】

Monitoring view	The monitoring view provides live view of every monitoring channel
Window operation menu	The menu controls all the devices within the window
Device list button	Click "Device" to show the list of all devices
View list button	Click "View" to show the list of all views
Multi-screen switch	To change the viewing number of multi-screen monitoring, simply select the "single screen" ,"four screens" ,"six screens"
Save view	Save the current monitoring view
tour	Follow the preset tour plans to tour

【Open the channels】

Select one of the windows in monitoring view, then double click one of the channels in Devices list

【operation menu】

	Choose display scale, auto resize turned on by default.
	Temporary manual record.
	Instantaneous manual record.
	Click to enable audio.
	
	Adjust the color of video on VMS, Not of the device. 
	Disconnect the video.

【PTZ control】

Click the button of PTZ  and pop up the control interface.

【Video color】

Click the button of color adjustment  and pop up the interface for adjusting video color.

3.3. Device Manager

Click the button of Device Manager, then enter the page of device manage, as it is shown below:

Name	CloudID	IP/Port	Vendor	Group
10.10.208.208	ee3bd21053210095	10.10.208.208:34555	XM	Default Group
10.10.208.27	9cd19256cadaa72e	10.10.208.27:34567	XM	Default Group
10.10.208.28	54f5249342b36d4d	10.10.208.28:34567	XM	Default Group
10.10.208.29	019a59f98a7b4da3	10.10.208.29:34567	XM	Default Group

Name	CloudID	IP/Port	Version	Group	Connect	Disk Status	Record Status	Connection	Operation
10.10.208.160	8275dff7207d...	10.10.208.160...	V4.02.R11.00000107.12201.130...	Default ...	Connect...			3	
10.10.208.162	c0dd7ffd613e...	10.10.208.162...	V4.02.R11.C6380203.12201.040...	Default ...	Connect...			4	

【IPV4 Search】 Click this button, the software starts to search for online devices which use IPV4 , the result of the search will be listed in the above block.

【IPV6 Search】 Click this button, the software starts to search for online devices which use IPV6 , the result of the search will be listed in the above block.

【Add】 Select the device which have been found in the above block(single click to select) and click “add” button, it could be added in the bottom block.

【Add Group】 Add new group which could place different kinds of devices inside, makes it simple to manage.

【Remove】 Select the device in the right block and click “remove” button, this device could be removed.

【Manual Add】 We could add device by input device’s IP、 port、 username and password manually.

【Edit】 Click the “Edit” button  to modify added device’s basic information.

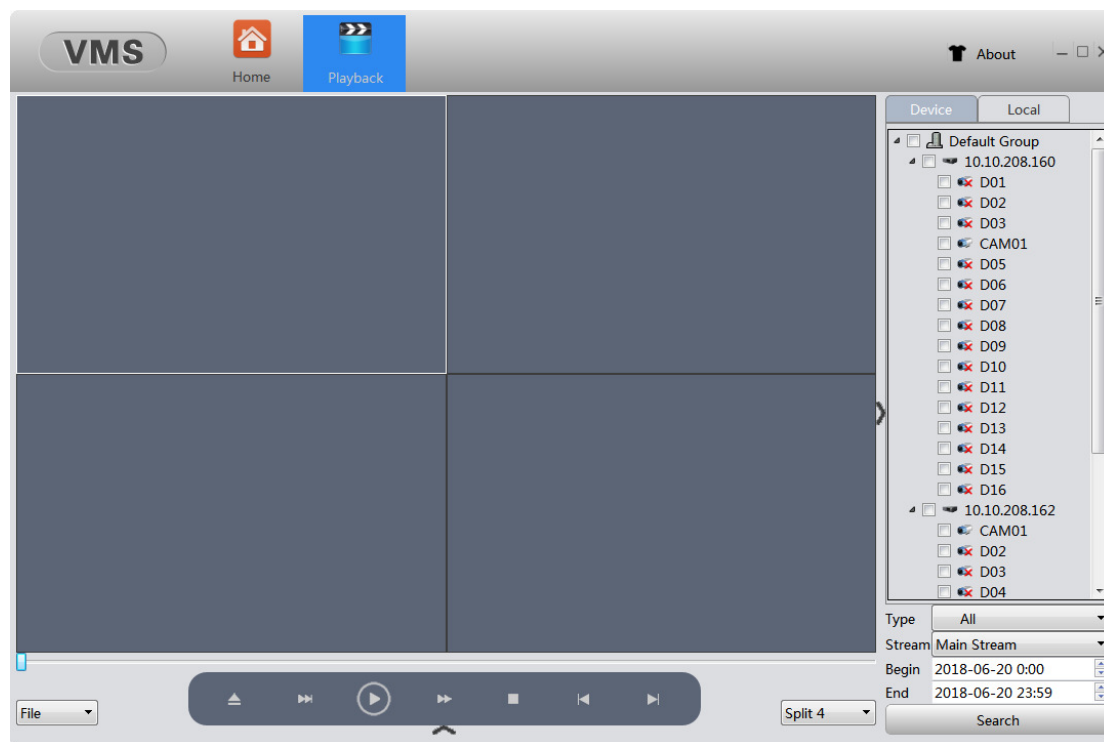

【Modify IP】 Click the “Modify IP” button  to modify added device’s IP address.

【DimenCode】 Click the “DimenCode” button  to show device’s name, cloud ID and QR code.

【Refresh】 Click the “Refresh” button  to refresh the decive.

3.4. Playback

Click the Playback button and enter the playback page, as it is shown below:

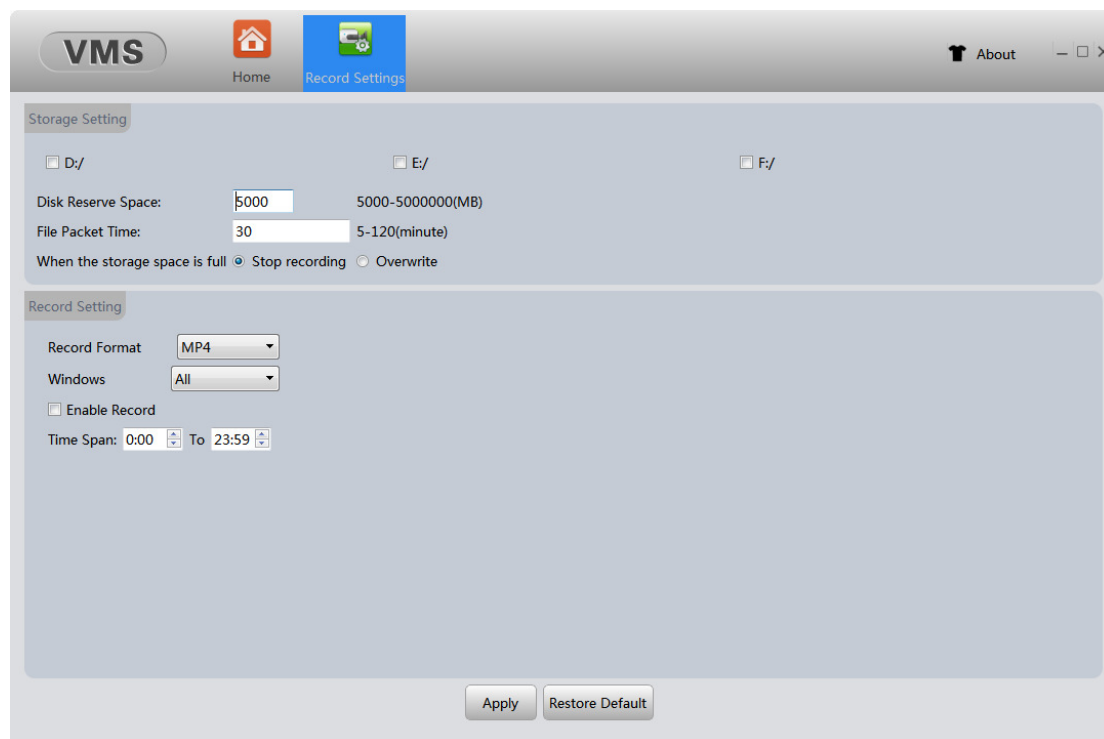

Video playback interface	This interface is used to show playback videos
Playback operate menu	Able to operate on record files
Playback type	Able to choose to playback in chronological order or in file type order
Multi-screen switch	To change the viewing number of multi-screen playback, simply select the "single screen" ,"four screens" ,"nine screens"
Local /device list	Set to search local or device for record files
Search list	List the record files that has been found
Search time window	Set the time window that you want to search for record

【Playback operate menu】

	Open file
	Fast play
	Play
	Slow play
	Stop
	Previous video
	Next video

3.5. Record Settings

Click “Record Settings” to enter it’s page, As shown in Figure below

【Storage settings】

Storage settings allows users to set a disk letter in order to store record files into the corresponding disk ;

The disk reverse space is specially set aside not to store video;

User can set the file packet time , in order to pack the files at corresponding time;

when the storage reached it’s full capacity, users can choose to stop recording or overwrite old files.

【Record settings】

Select corresponding record format and window, set user’s time span and tick Enable Record, click apply to save the setting. Then the VMS will start recording appointed window once reach the selected time span.

3.6. Log

Click “Log” button to enter the log page, as the picture shown below.

【client end】

Click the “client” button, set designated time span(type in begin time and end time)and start searching, the system can find client’s logs during the chosen time span. And also can search by log types.

【device end】

Click the “device” button, set designated time span(type in begin time and end time)and start searching, the system can find device’s logs during the chosen time span. And also can search by log types.

【previous/next page】

Click to turn the log page.

3.7. Alarm Info

Click Alarm Info to enter the Alarm Info page, as the picture shown below.

The screenshot shows the VMS Alarm Info page. The interface includes a navigation bar with 'Home', 'Alarm Info' (selected), 'Monitor(1)', and 'Device Config'. Below the navigation bar, there are filters for 'Untreated/All' and '6/6' items, along with a 'Clear List' button. The main content is a table with the following data:

No.	Processing Status	Alarm Type	Time	Device	Channel
1	Unprocess	Motion Detect Happen	2016-02-23 13:49:07	10.10.200.188	1
2	Unprocess	Motion Detect Stop	2016-02-23 13:49:08	10.10.200.188	1
3	Unprocess	Motion Detect Happen	2016-02-23 13:49:11	10.10.200.188	1
4	Unprocess	Motion Detect Stop	2016-02-23 13:49:11	10.10.200.188	1
5	Unprocess	Motion Detect Happen	2016-02-23 13:50:03	10.10.200.188	1
6	Unprocess	Motion Detect Stop	2016-02-23 13:50:04	10.10.200.188	1

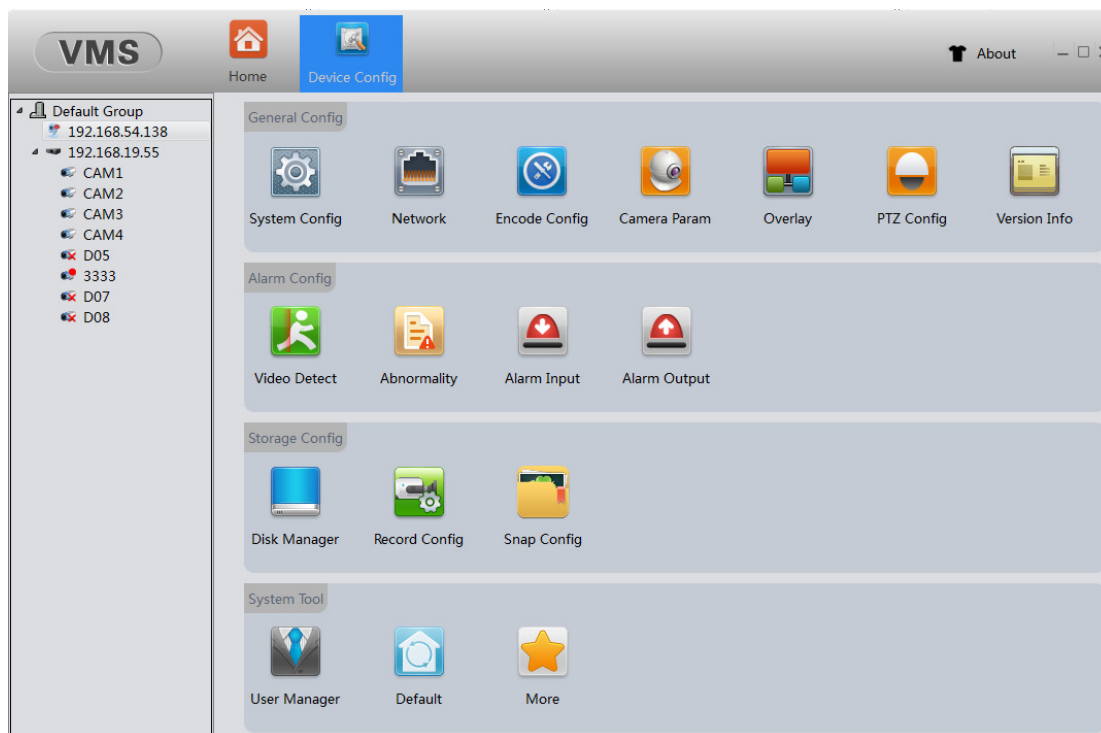

【alarm information list】

In the list all the treated and untreated alarms are shown, double click the untreated information will change it's status into treated. Click "Clear list" will clear all alarm information.

4. Config Manage

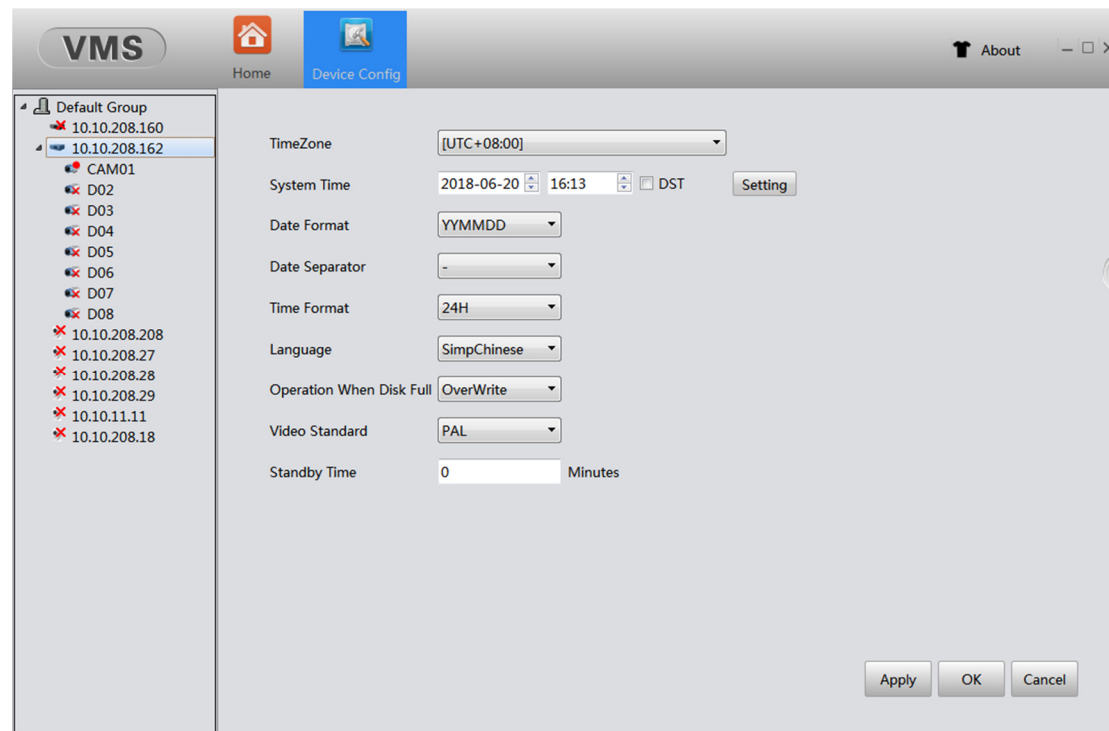

4.1. Device Config

Click “Device Config” to enter Device Config page, as the picture shown below.(Display differences might exist when it comes to different devices).

4.1.1. System Config

Click “System Config” to enter System Config page , as the picture shown below:

【Time Zone】 to set time zone for recorder.

【System time】 to set time for recorder.

【Date format】 set the display format of date.

【Time format】 set the display format of time.

【Language】 28 kinds of languages such as Simplified Chinese, traditional Chinese, English, Persian, Finnish, French, Greek, Hungarian, Italian, Japanese, German, polish, Portuguese, Russian, Spanish, Thai, Turkish, Vietnamese, Romanian language, language of Brazil, Indonesian, Swedish and Arabic, Bulgarian, Czech, Hebrew.

【Operation when disk full】 when the storage reached it’s full capacity, users can choose to stop recording or overwrite oldest files.

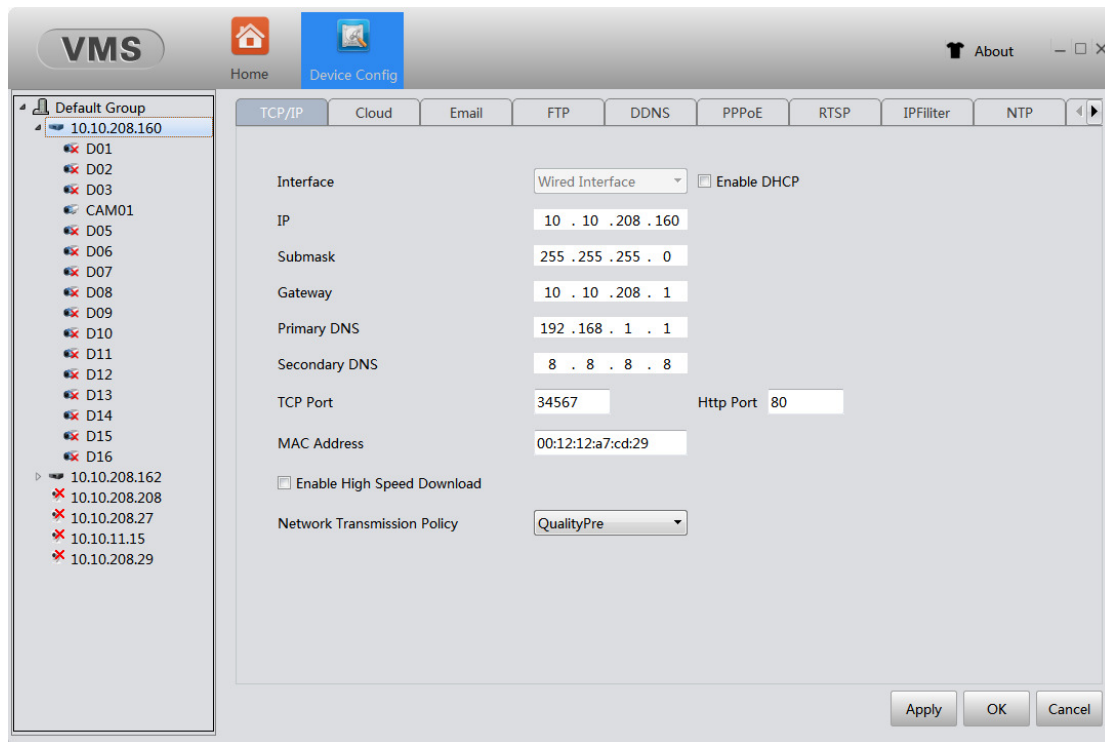

【Video standard】 there are two kinds of video standard, PAL and NTSC. the standard in the recorder should be in correspondence with it’s front end cameras.

【Standby time】 able to set standby time from 0 to 60 minutes.

4.1.2. Network settings

TCP/IP setting

Click “Network settings” to enter network setting page, select “TCP/IP” to config, as the picture shown below:

【Interface】 To show the type of network interface the device is using

【IP】 To config the IP address of the device

【Submask】 To config the subnet mask of the device

【Gateway】 To config the gateway of the device

【Primary DNS】 To config the primary DNS of the device

【Secondary DNS】 To config the Secondary DNS of the device

【TCP port】 To config the TCP of the device

【Http port】 To config the Http of the device

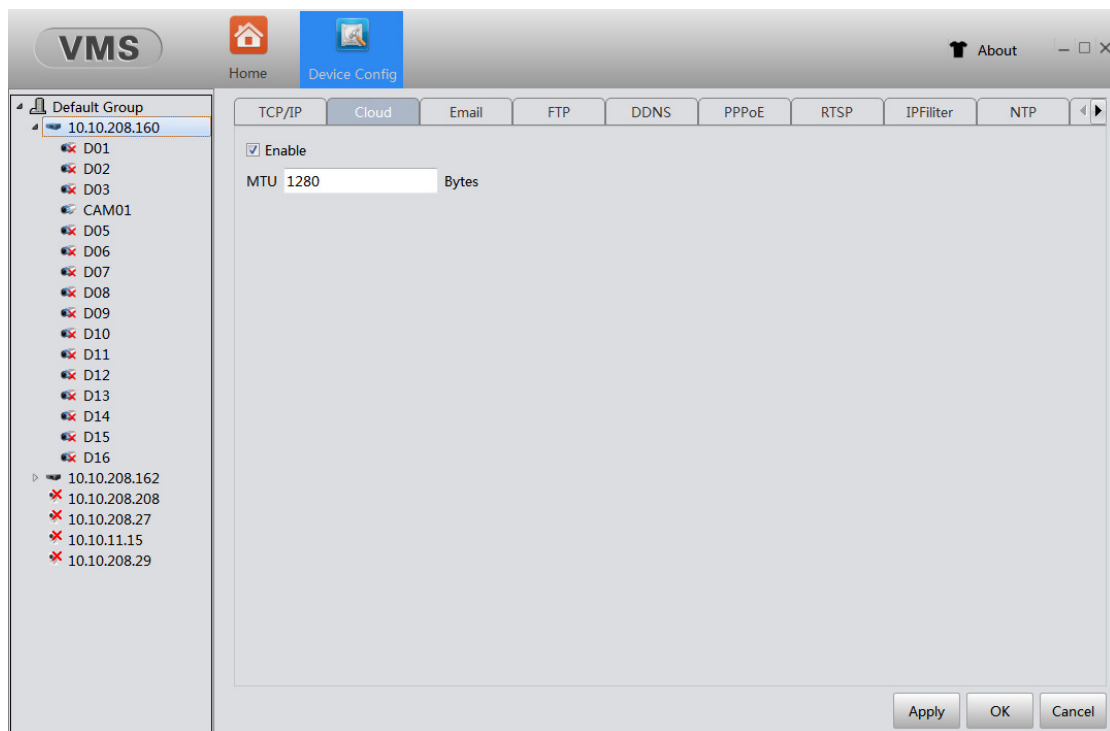

【MAC address】 To config the MAC address of the device

【Enable high speed download】 Tick this option to speed up the download process

【Network transmission policy】 Able to choose adaptive/quality Pre/fluency Pre/transmission Pre

Cloud setting

Click “cloud” to enter cloud page , as the picture shown below.

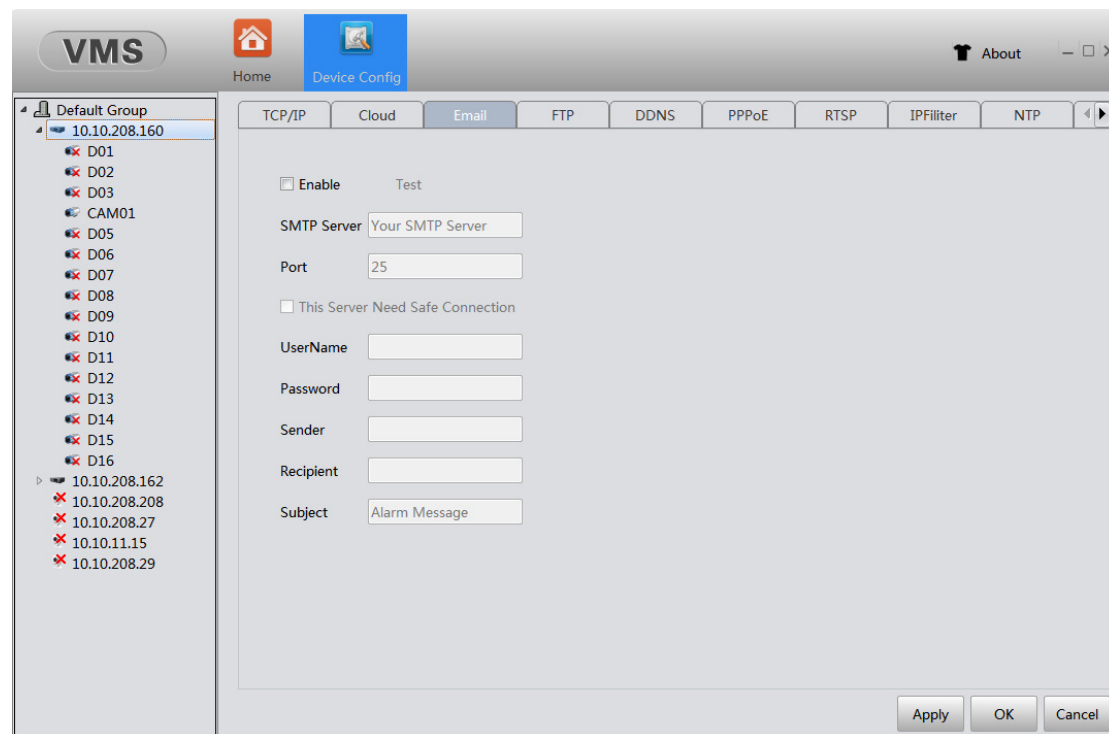

【Enable】 tick to activate the cloud service, users are able to remotely login using the exclusive serial number of the recorder via <http://www.xmeye.net>, to view and to manage the recorder. The serial number can be found in Home/Device Config/Version Info

【MTU】 config Maximum Transmission Unit figure

E-mail setting

Click “E-mail” to enter E-mail page , as the picture shown below.

With necessary parameter settings, the device will send alarm information and snapshot picture to appointed mailbox.; Please enable the snapshot function in the alarm setting before use, otherwise there will be no photo.

【SMTP sever】 the SMTP sever address, could be an IP address or a domain name (the DNS should be set correctly in order to use domain name)

【Port】 sever port number

【SSL】 choose to use secure socket layer or not

【Username/Password】 sender’s username and password

【Sender】 exact address of sander’s mailbox

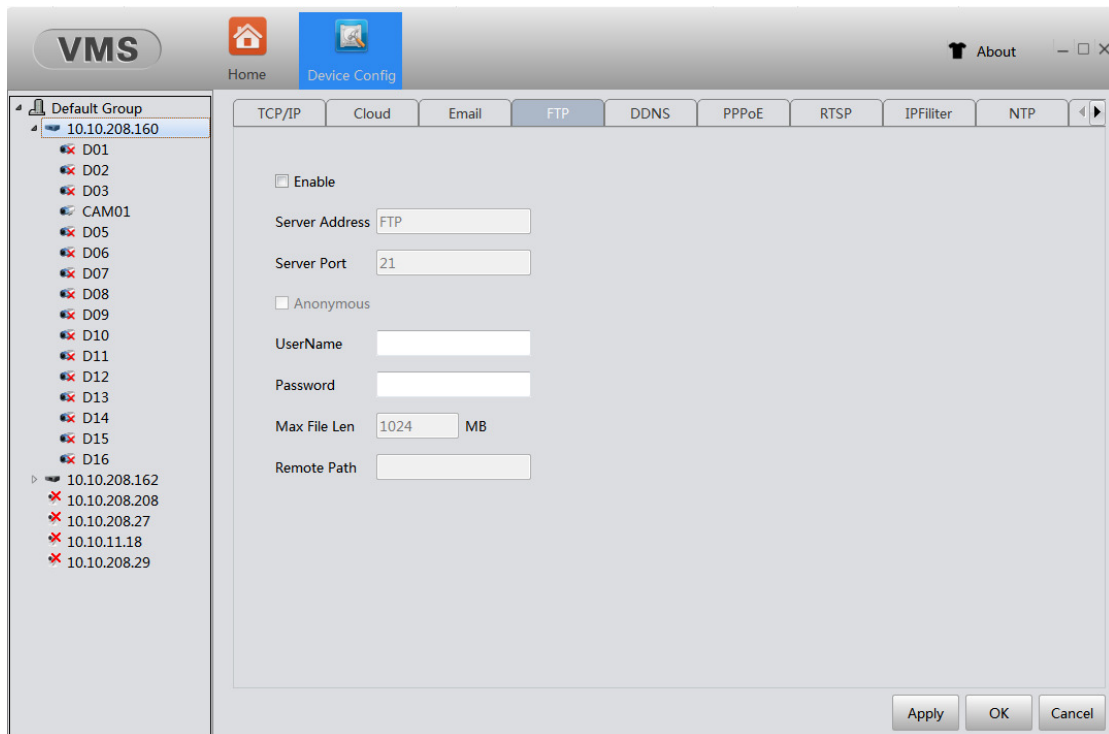

【Recipient】exact address of alarm recipient’s mailbox. three recipient’s addresses at most, use a semicolon to separate.

【Subject】 the subject of the alarm E-mail, users can config according to their own needs

【E-mail test】 after finish filling information, click “TEST” ,the in box will receive the test mail if it’s a success ,otherwise tips failure, please check network condition and your configuration.

FTP setting

Click "FTP" to enter FTP page , as the picture shown below.

【Server Address】 appointed FTP sever's address, if the sever is in wide area network, the recorder must be connected to the wide area network , too

【Sever port】 FTP sever's port number FTP (default number 21)

【Username/password】 the username and password that user registered on the FTP sever, which also requires it's authority.

【Anonymous】 tick the anonymous allows users to upload files to the FTP sever without logging in, in order to make this work, please make sure the FTP sever allows anonymously access.

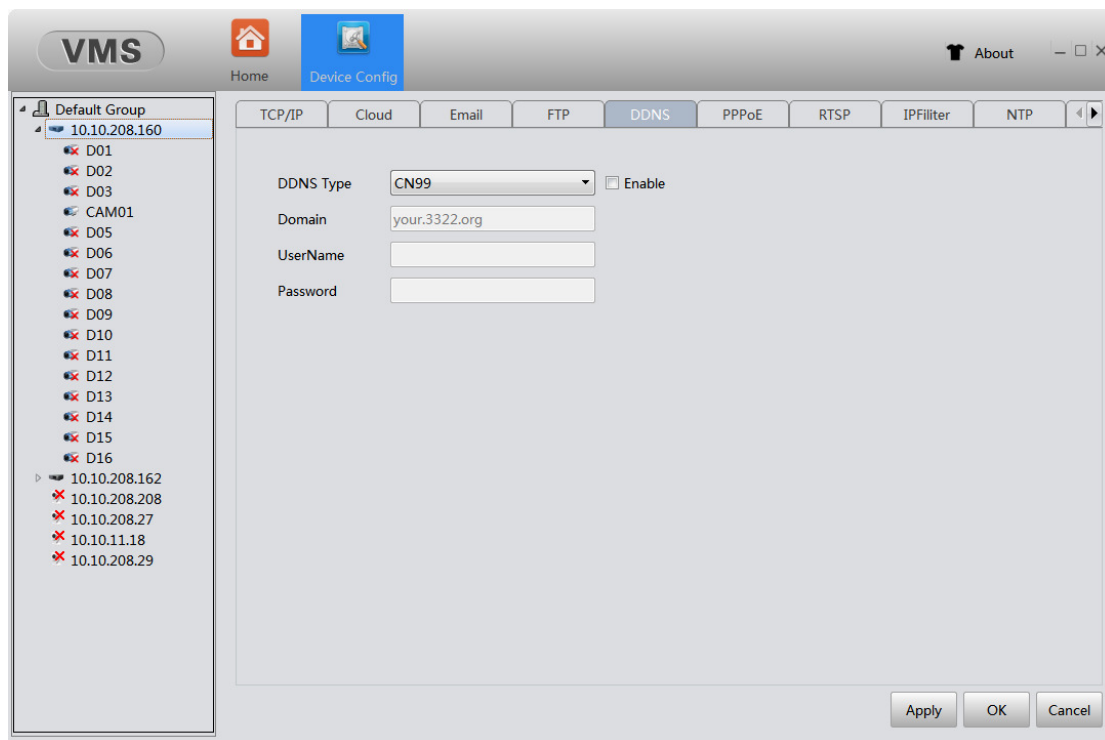

【MAX file len】 the max file length of each file packet, default value 128M

【Remote path】 the file path in the sever that is meant to receive uploaded data

Note: this account have upload authority to the sever.

DDNS setting

Click “DDNS” to enter DDNS page , as the picture shown below.

【DDNS type】 to choose the DDNS service provider

【Domain】 the domain name binding with the record's IP , usually provided by DDNS service provider

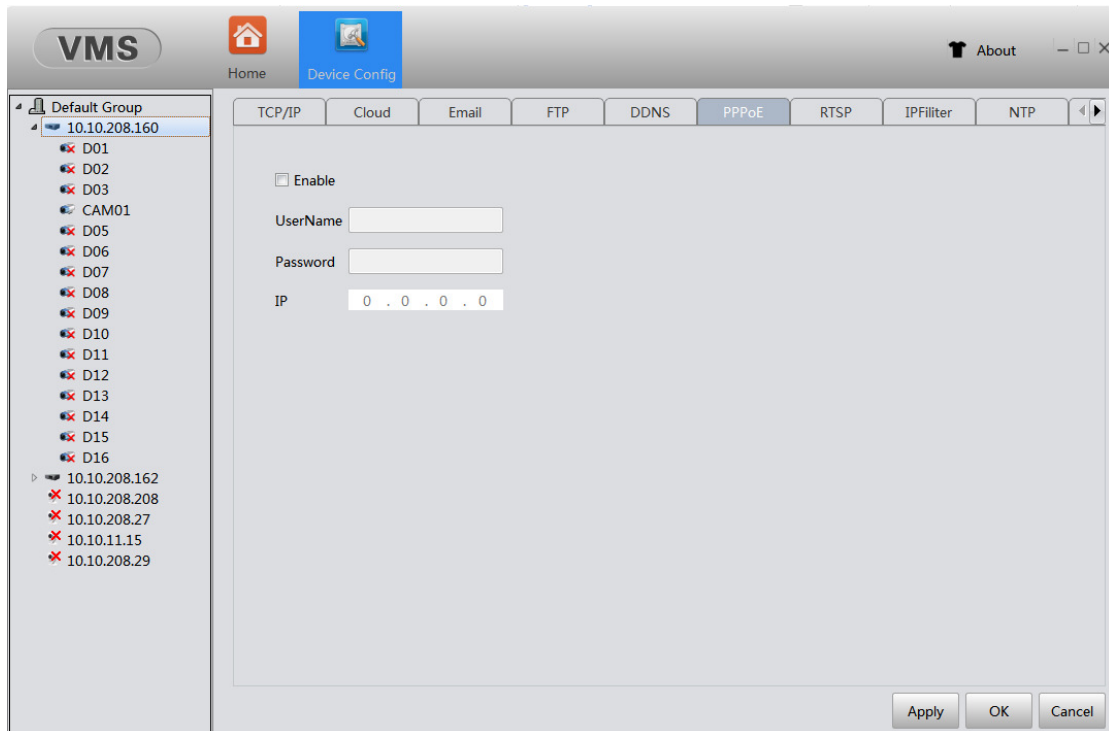

【Username/Password】 the username and password registered in DNS service provider

Note: the DNS setting should be configured correctly

PPPOE setting

Through the PPPOE, The recorder can be remotely accessed through Wide Area Network. This requires an exclusive dial-up networking

Click “PPPOE” to enter PPPOE page , as the picture shown below:

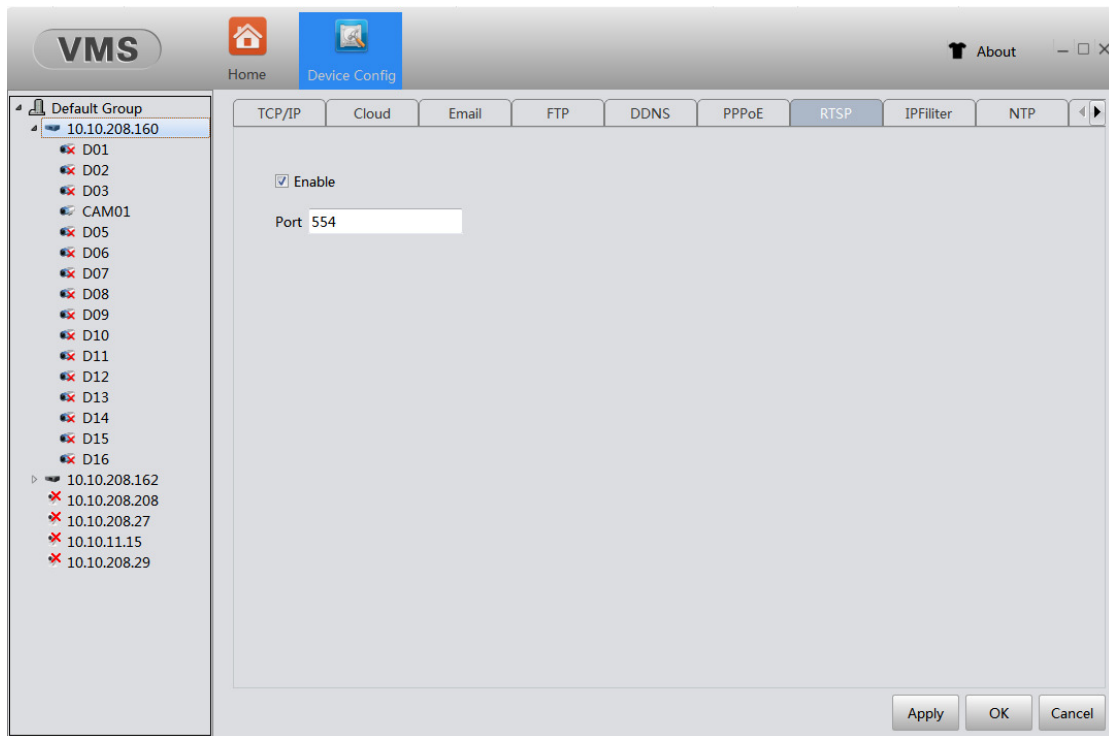

【Enable】 tick “enable” to activate PPPOE

【Username/Password】 type in username and password provided by ISP, save and restart recorder according to the tips. The recorder will establish Internet connection after restart, the IP address will be shown in the IP column

RTSP setting

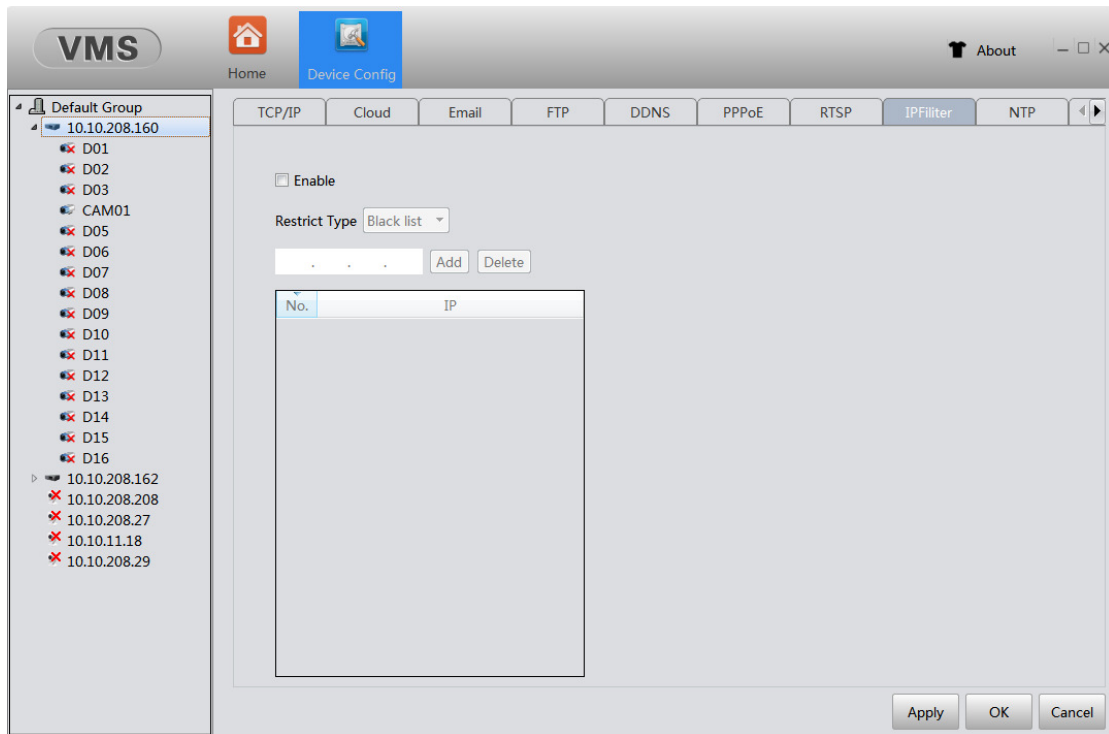

View recorders' videos using non IE kernel browsers and streaming media.

【Port】 the default port number for devices is 554.

IPFilter setting

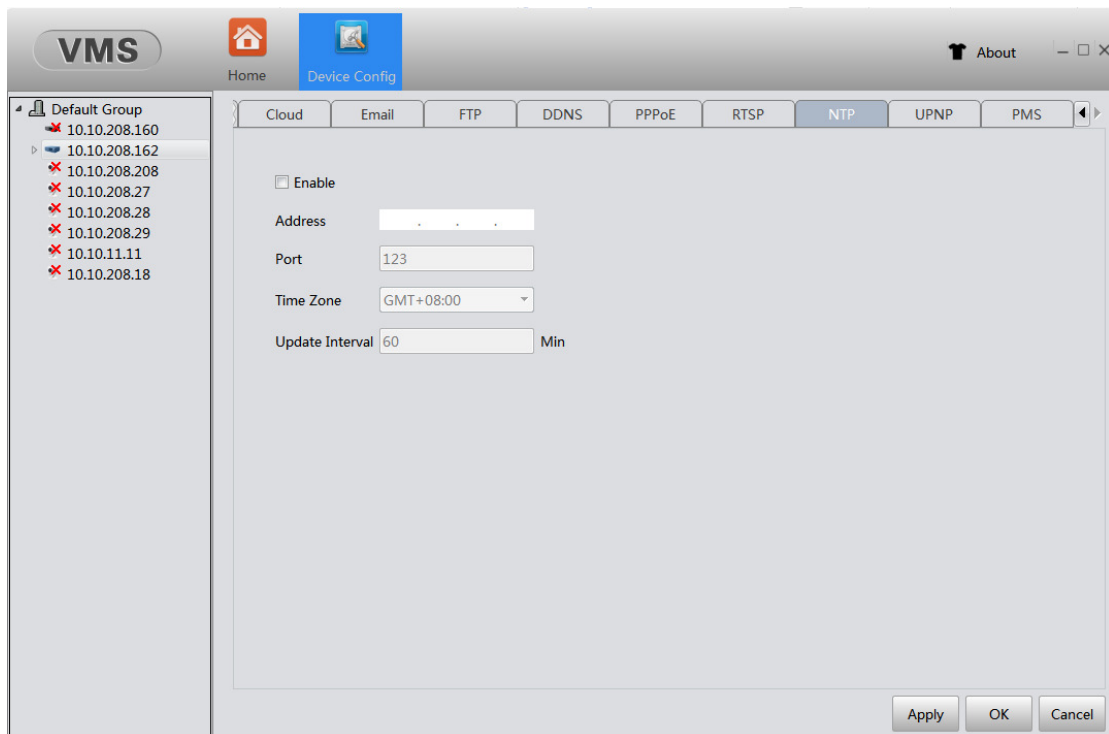

Click “IPFilter” to enter IPFilter page , as the picture shown below:

【Restrict Type】 Choose the Black list or White list to filter the IP address. The network will show the devices with IP address which you want to view.

NTP Setting

Click “NTP” to enter NTP page , as the picture shown below.

【Address】 enter the IP address of NTP Server, the device will synchronize time through it.

【Port】 the default port number for devices is 123.

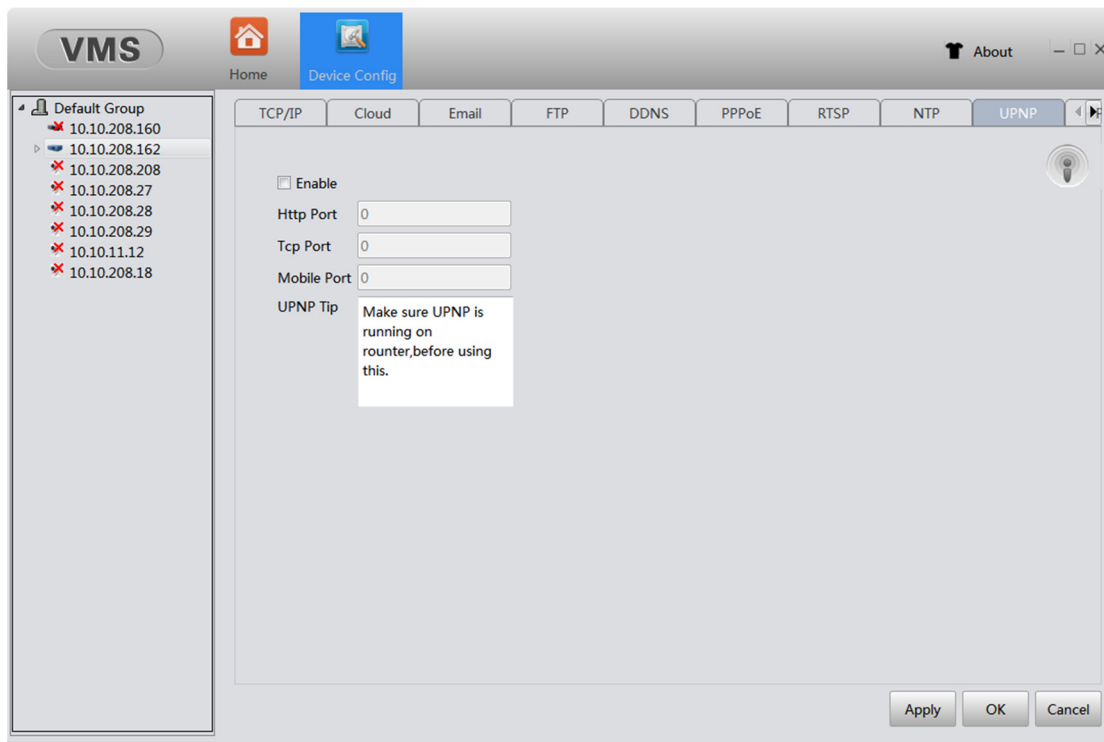

【Time Zone】 to choose the time zone of devices.

【Update Interval】 to choose the interval to update time.

UPNP Setting

UPNP can make devices directly connect to the Internet without having to do cumbersome mapping port settings.

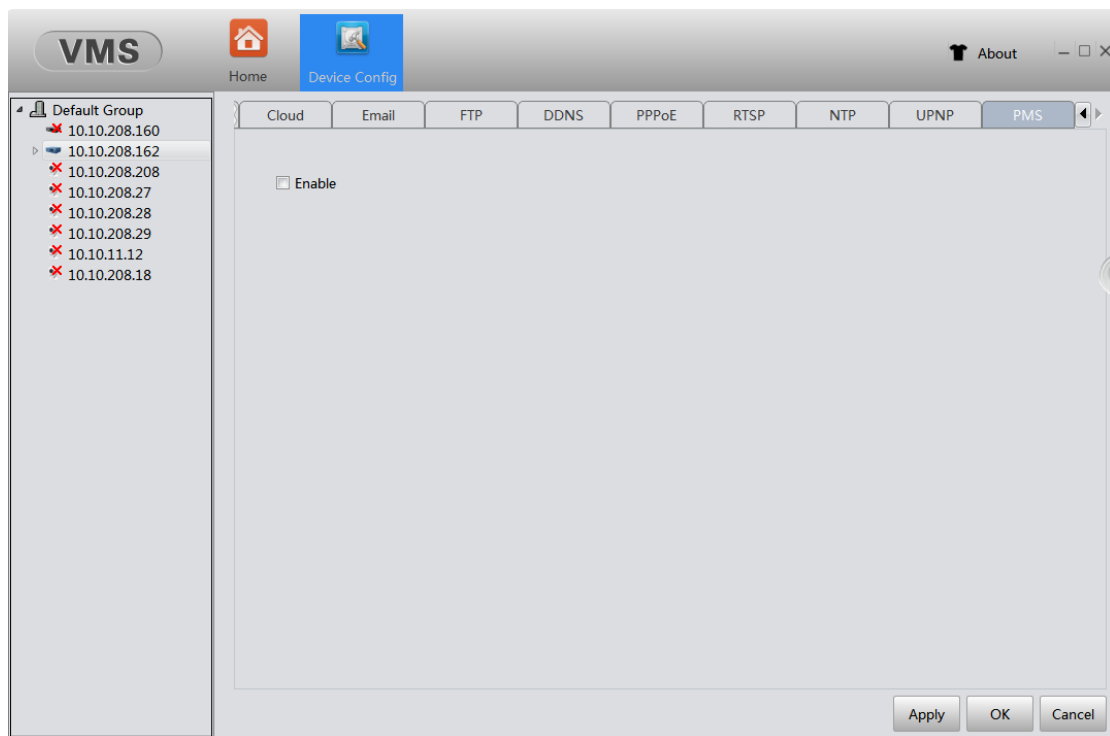

Click “UPNP” to enter NTP page , as the picture shown below:

Before using UPNP, you should make sure UPNP is running on router.

PMS Setting

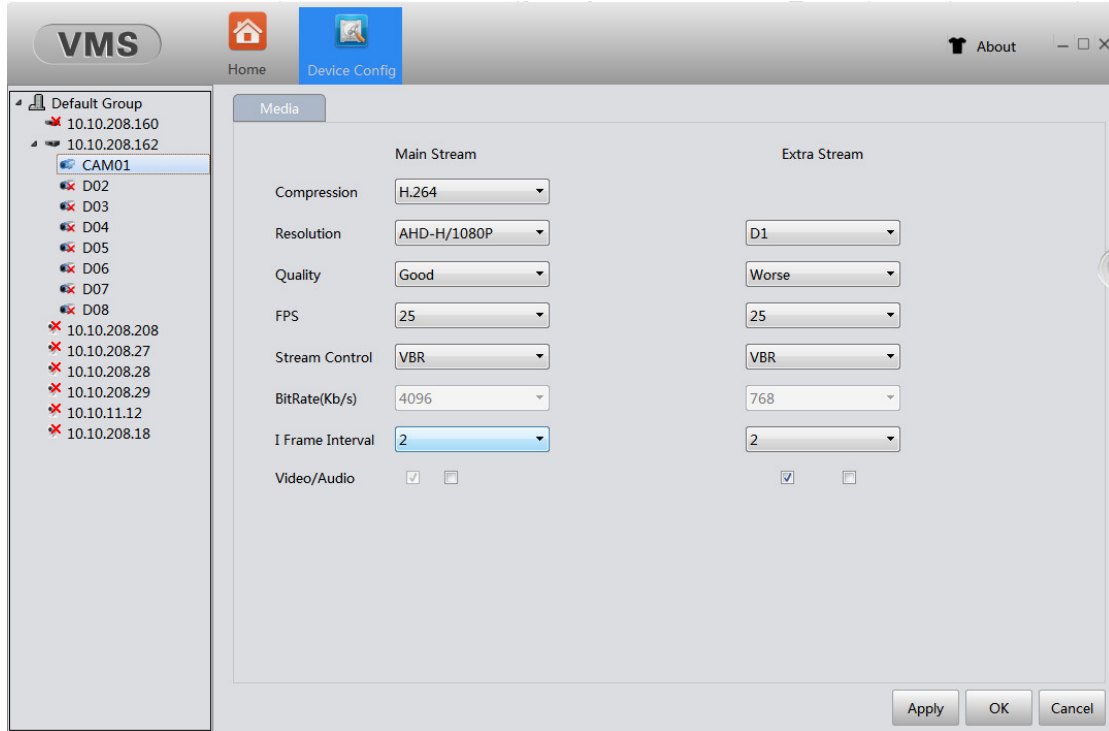

Click “PMS” to enter NTP page , as the picture shown below.

【Enable】 tick “enable” to activate PMS.

4.1.3. Encode Config

Click “Encode Config” to enter Encode Config page , as the picture shown below:

【Channel】 users can choose the channel they would like to config in the menu.

【Compression】 standard H.264.

【Resolution】 able to select display resolution , multiple choices such as 1080P ,720P, 960H...

【FPS】 able to select FPS frame rate, when under PAL standard, the frame rate is adjustable from 1 to 25, when under NTSC standard, the frame rate is adjustable from 1 to 30 .

Note: low frame rate will have an impact on the fluency but occupies smaller flow.

【Stream control】 two strategies for stream control VBR and CBR. When user sets VBR, there are six grades of quality choices. When the system is under CBR setting, users can manually sets the bit rate to suit the network condition.

【Quality】 when VBR was chosen in the stream control. Users are able to choose the quality of the videos. High quality videos also requires a large bit rate. the bit rate changes in different situations, dynamic scenes need larger bit rate than steady scenes, the scenes' high complexity also contributes to a larger bit rate.

【Bitrate】 when CBR was chosen in the stream control , users are able to control the bit rate by setting the ideal bit rate number. Once set, the bit rate will not rise or fall dramatically with the changes of scene, it fluctuates around preset number.

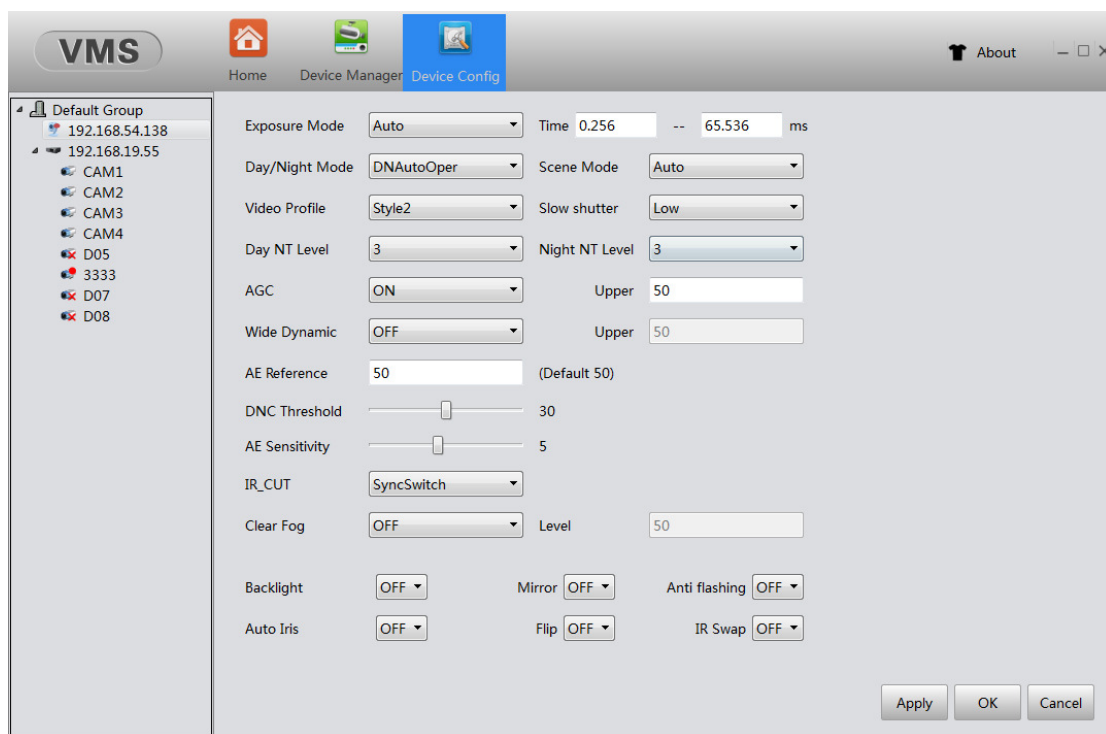

【I frame interval】 interval time between key frames, optional from 2 to 12, smaller this figure was set the larger bit rate there will be, hence the better video qualit .

【Video/Audio】 tick the “audio” to enable audio function, then user are allowed to click the audio sign in the monitoring view to conduct audio surveillance .only when extra stream was enabled can users view video through extra stream.

4.1.4. Camera Param

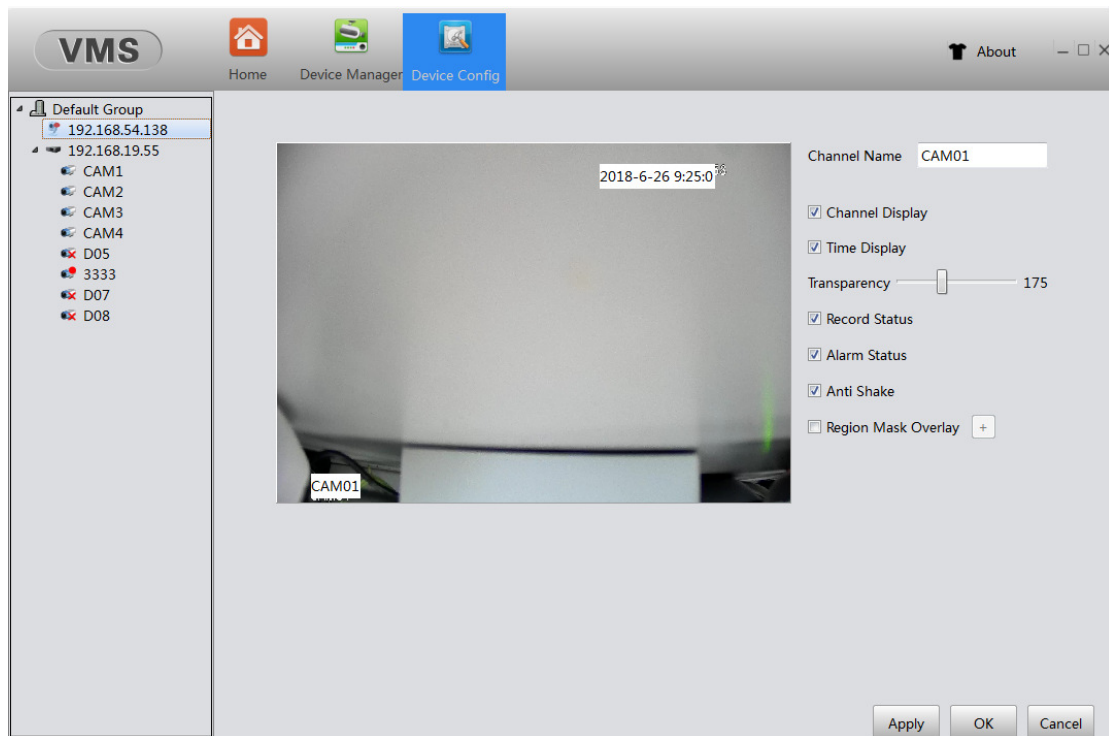

Click “Camera Param” to enter Camera Param page , as the picture shown below.

Users are able to modify IPC parameters.

4.1.5. Overlay

Click “Overlay” to enter Overlay page, as the picture shown below:

【Channel Name】 able to change channel names (21 Chinese symbols or 42 English letters maximal) .

【Channel Display】 tick to display channel number on surveillance view.

【Time Display】 tick to display time and date on surveillance view.

【Transparency】 adjust transparency of the back ground from 128 to 255.

【Record status】 tick to display record status on surveillance view.

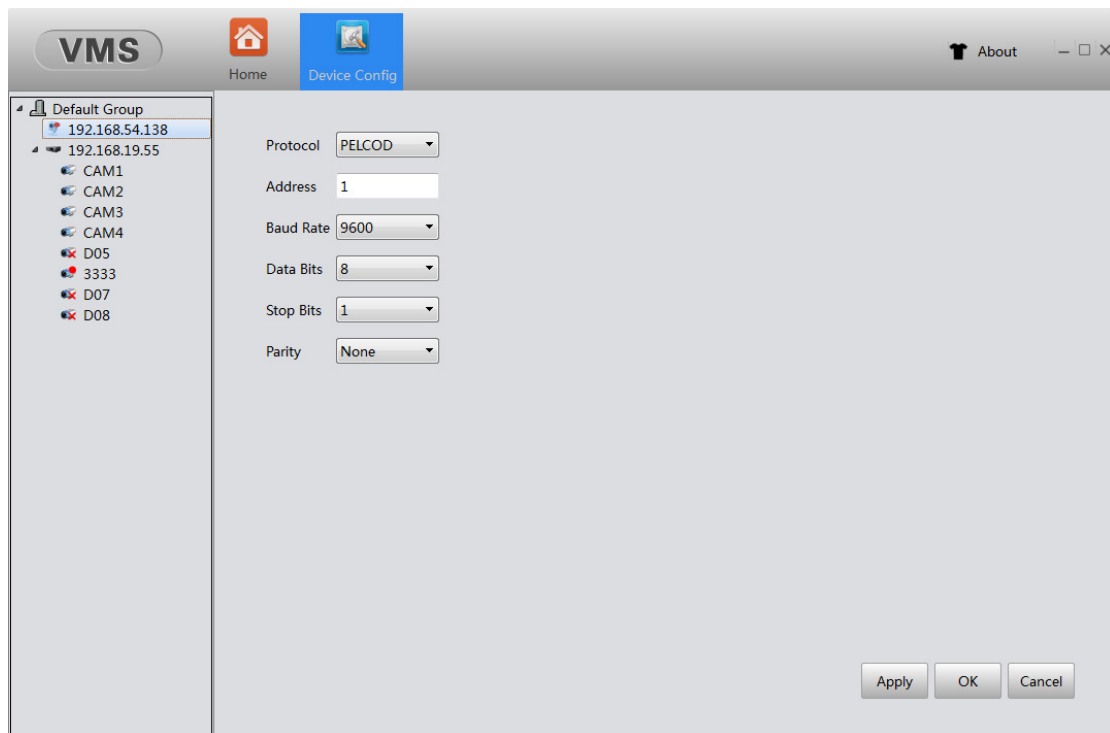

【Alarm status】 tick to display alarm status on surveillance view.

【Anti shake】 tick to display shake information on surveillance view.

【Region mask overlay】 tick to select region mask overlay, click “setting” to enter the corresponding channel. user can select an area to cover up by using the mouse. The covered area are black blocks.

4.1.6. PTZ Config

Click “PTZ Config” to enter PTZ Config page, as the picture shown below:

【Protocol】 select the chosen PTZ protocol.

【Address】 chosen PTZ address, default figure is 1.

【Baud rate】 choose PTZ baud rate, default figure is 115200.

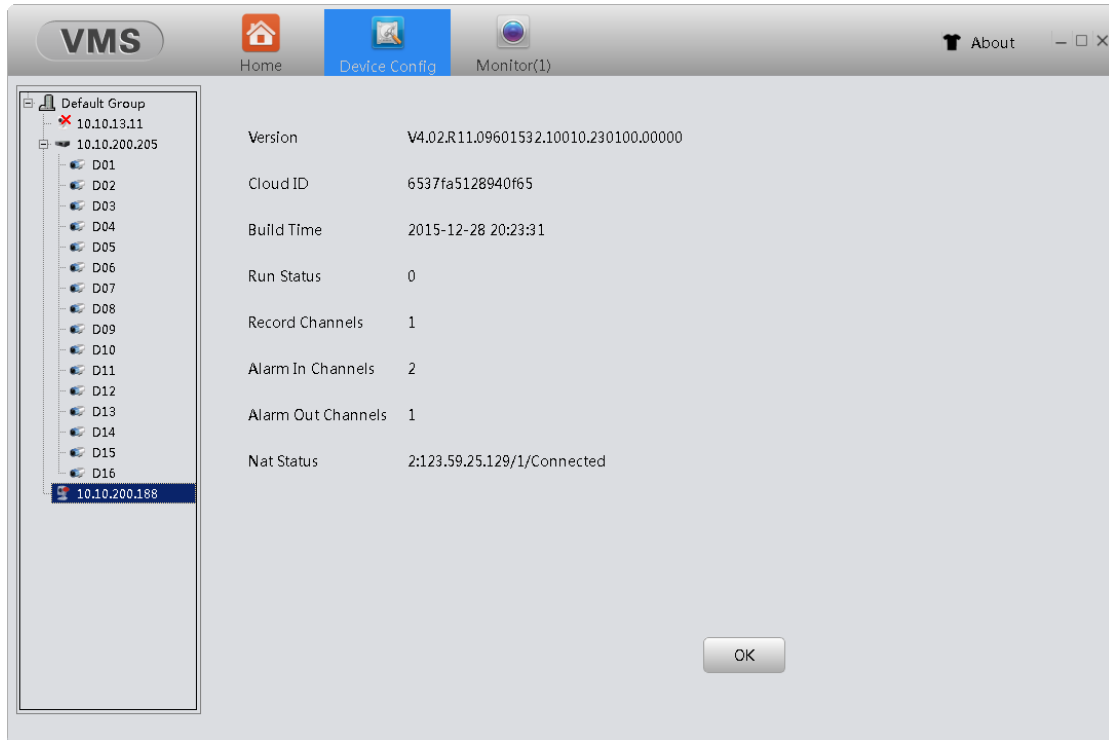

【Data bits】 including 5 to 8 options, default figure is 8.

【Stop bits】 including two options, 1 and 2, default figure is 1.

【Parity】4 kinds of check methods: odd parity check , even parity check , mark check and space check , default method is none.

4.1.7. Version Info

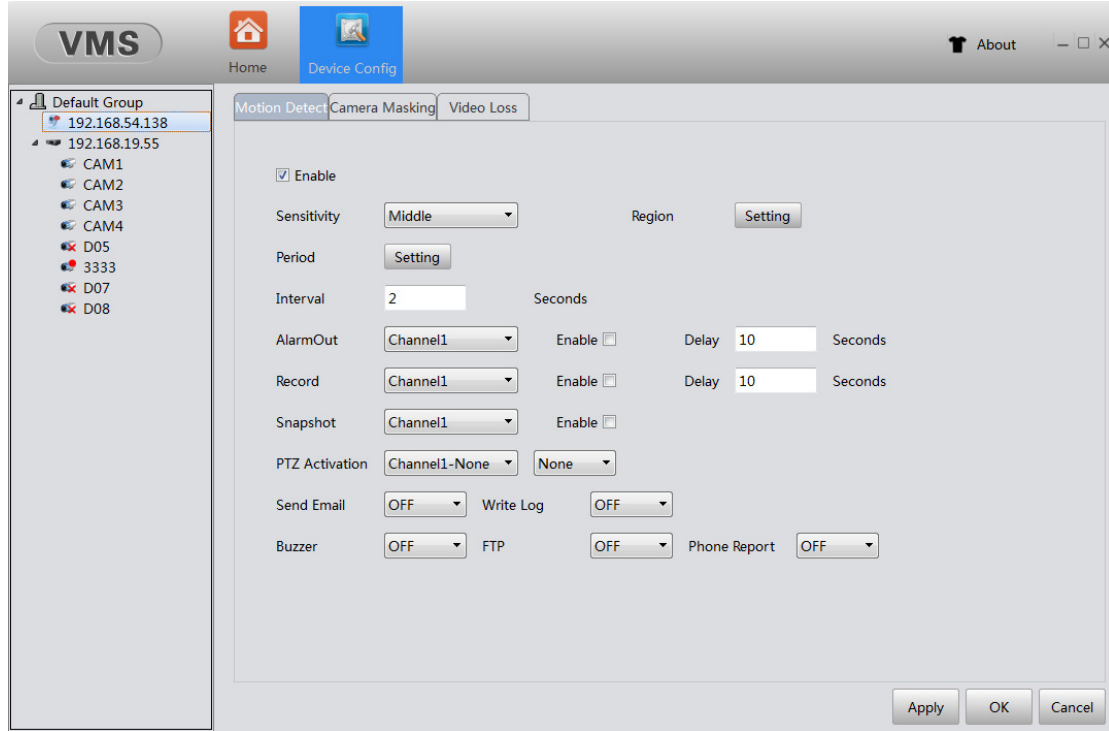

Click "Version Info" to enter Version Info page, as the picture shown below.

4.1.8. Video Detect

Click the button of Video Detect, it would appear the interface accordingly, as shown below.

Select the button of Camera Masking, then could enter the interface accordingly:

【Enable】 Tick the check box in front of enable means that the motion detect function is on. Then you can set up the corresponding settings.

【Sensitivity】 Choose in the six options according to the sensitivity, Lowest, Lower, Middle, High, Higher and Highest.

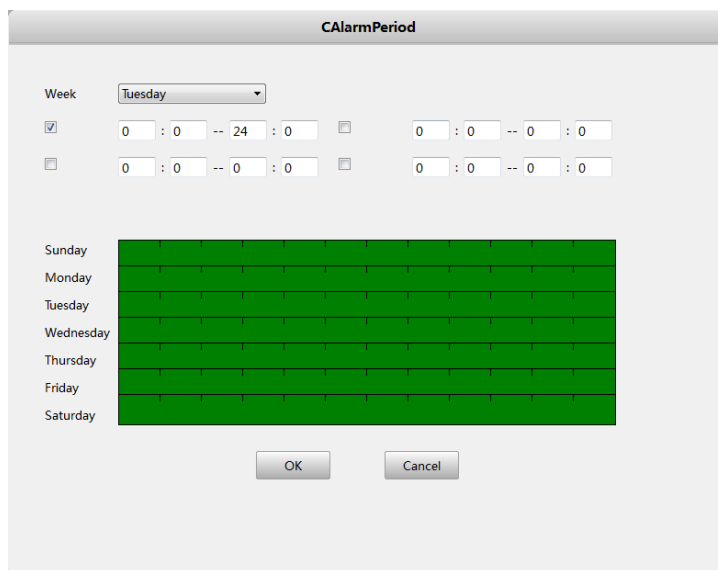

Note: Only the motion detect under hybrid mode/ full analog mode have this function of setting sensitivity, and also only the analog channel can set region.

【Region】 Click [setting] to enter the set area. The area is divided into PAL22X18. Black block means the motion detect defensive area. Blue block means the unfenced area. You can set the area as followed, Drag the mouse and draw the area. Default: all selected blocks are detection area.

Note: Only the motion detect under hybrid mode/full analog mode have this function of setting region, and also only the analog channel can set region.

【Period】 Trigger the motion detect signal in the set time section. You can set according to week or set uniformly. Each day is divided into four time sections.

【Interval】 Input the time to set interval.

【Delay】 Delay a few moments and stop when the alarm state is turned off. The range is 10~300 seconds.

【Record】 Choose the recording channel (multiple option supportive). Trigger the video signal when the motion detect is turned on.

Note: Set in the [recording setup] and perform the linkage recording. Start detecting video files in the corresponding time section.

【Tour】 Start the tour recording of corresponding linkage alarm when the motion detect is turned

on.

【PTZ Activation】 Set the PTZ activation when the motion detect is turned on.

*Hybrid mode, PTZ link to the related PTZ information of analog channel, While digital channel model, the PTZ is link to the related PTZ information on the remote device connected.

【Show Message】 Turn on it means show the message to user when the alarm is turned on.

【Send Email】 Turn on it means sending an email to user when the alarm is turned on.

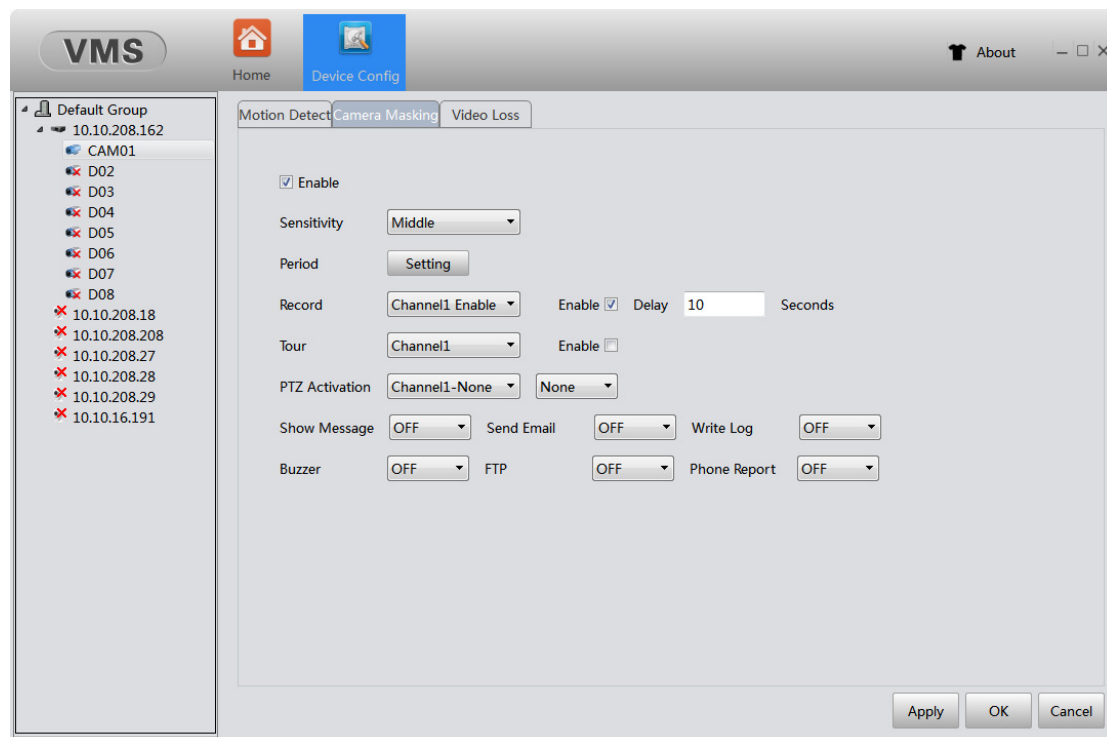

Note: Set in the [Network] and Email.

【Write Log】 Turn on it means sending a log when the alarm is turned on, you can search the log from device log.

【Buzzer】 When alarm happens, device will come out with buzz.

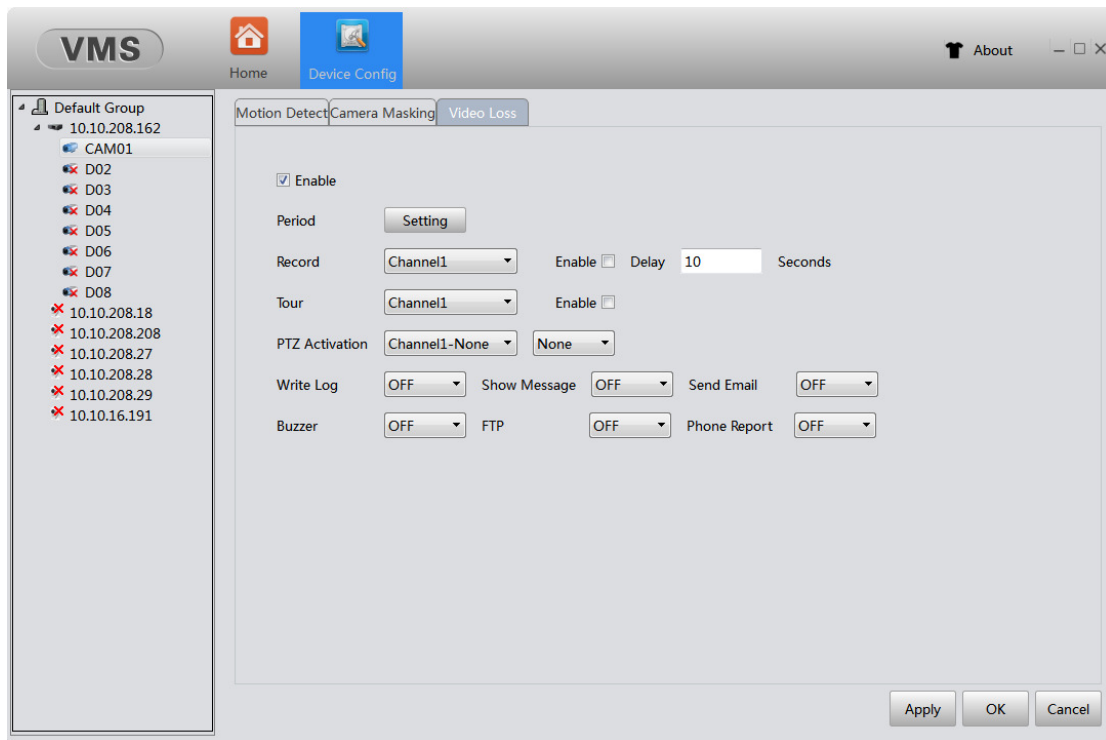

【Phone Report】 Turn on it, the phone connected to the devices will get report when detecting the alarm.

Select the button of Camera Masking, then could enter the interface accordingly, as shown below:

Set method: refer to Motion Detect.

Select the button of Video loss, then could enter the interface accordingly, as shown below:

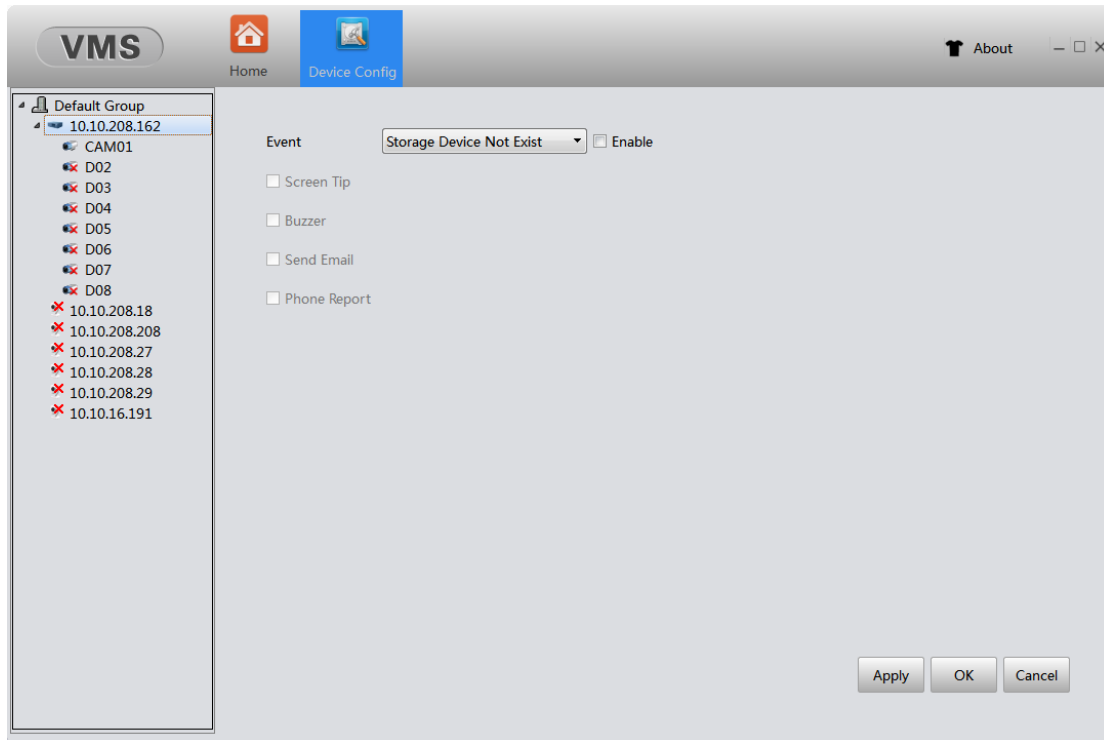

Set method: refer to Motion Detect.

4.1.9. Abnormality

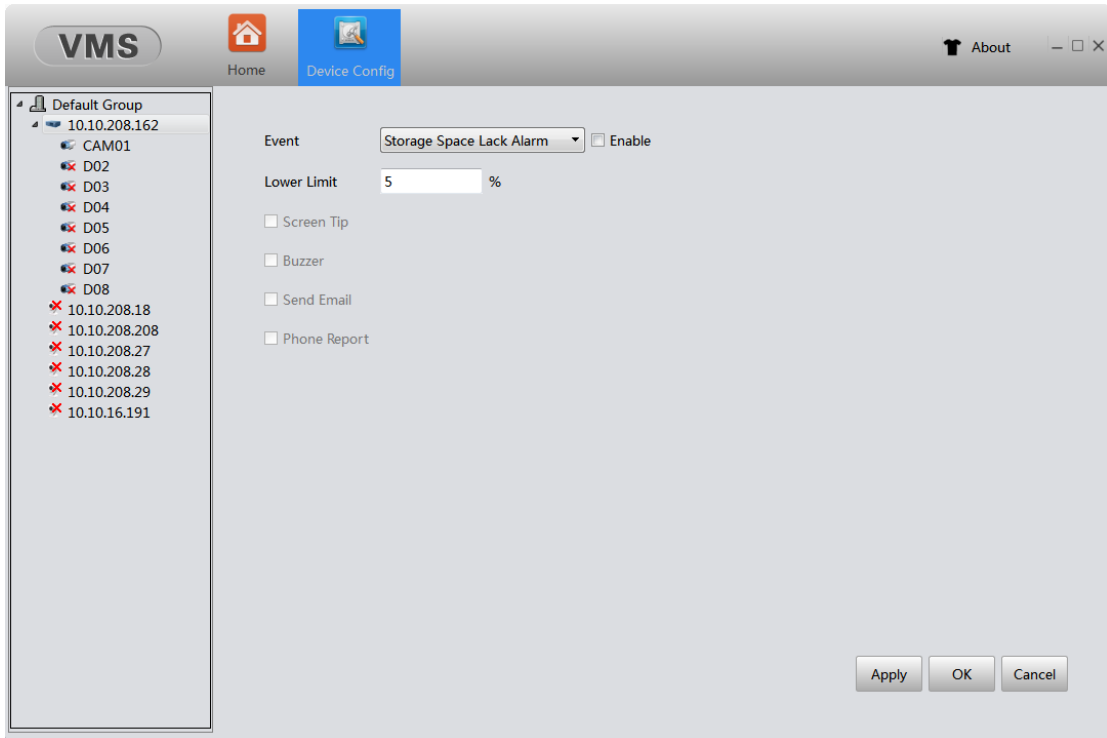

Click “Abnormality” to enter Abnormality page , as the picture shown below.

To supervise the storage of the recorders and network condition. Alarm when any abnormality occurs.

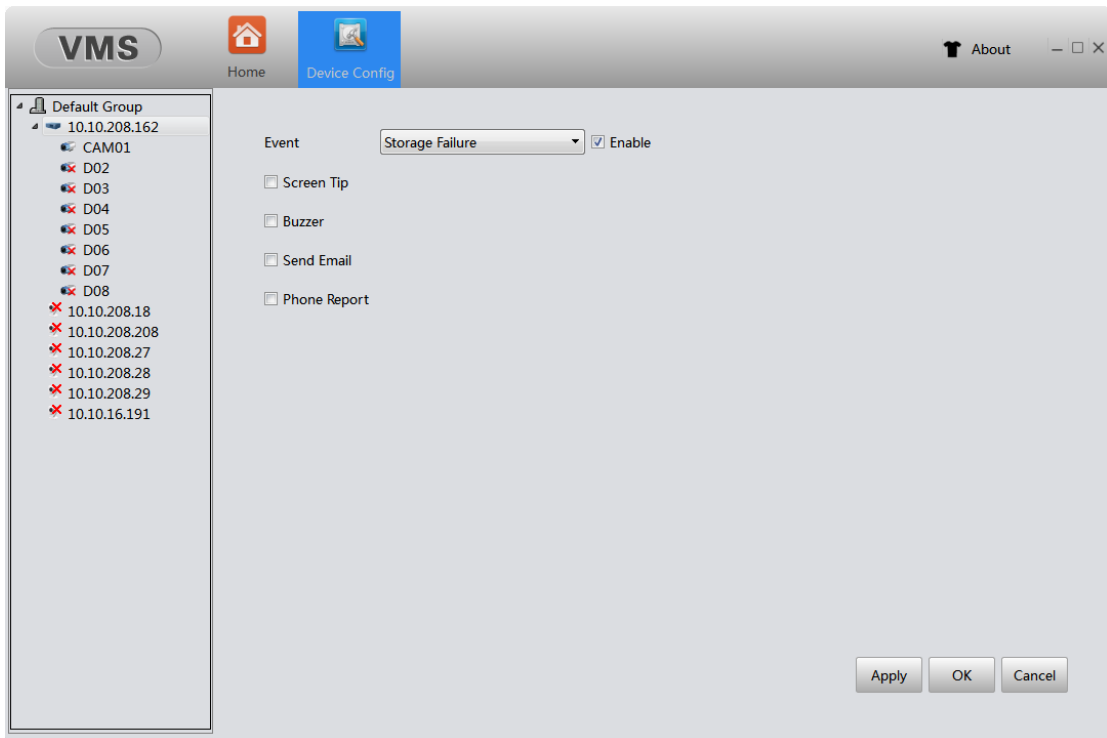

【event】 five different settings for each kind of event.

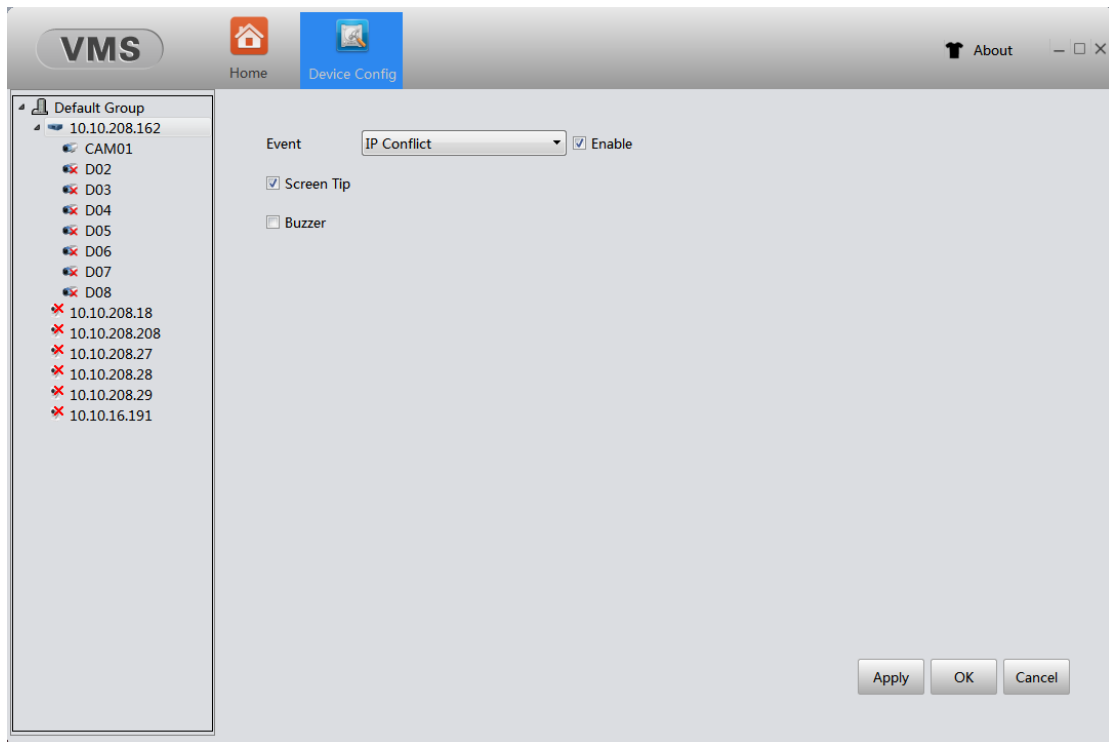

【Storage Device Not Exist】: the recorder can not detect storage device. Could be a damaged link to the storage device or a storage device damage.

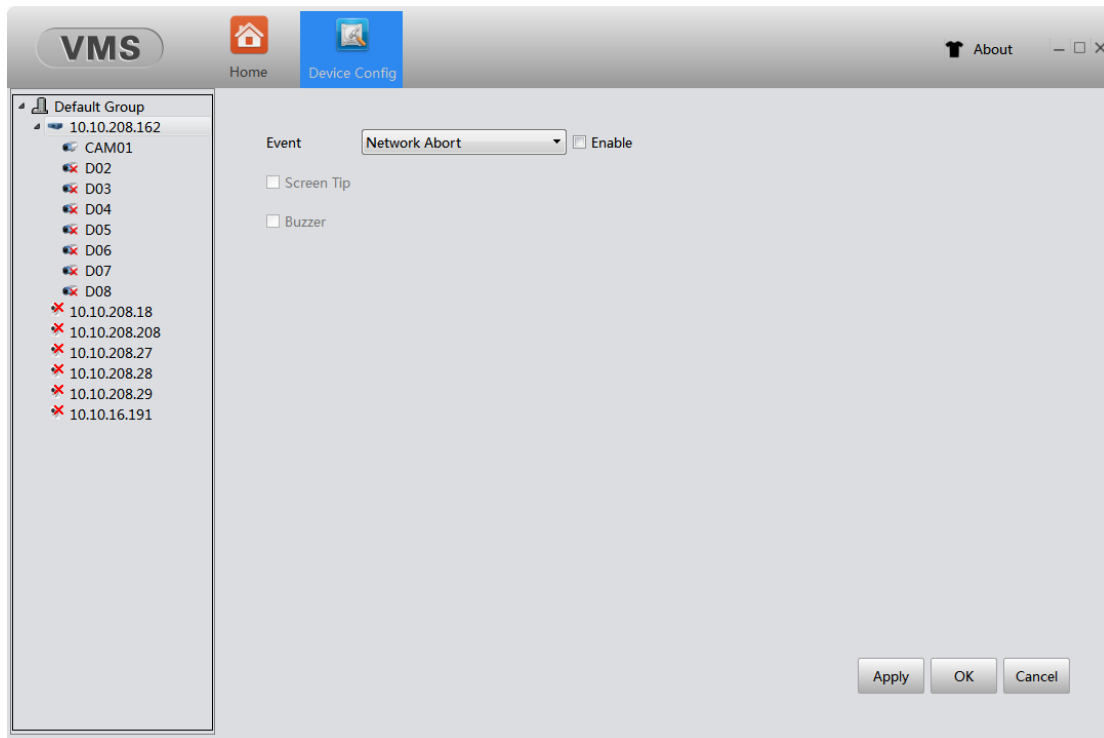

【Storage space lack alarm】: allows users to set a minimum threshold for Storage space, once breached, alarm will be triggered

【Storage Failure】 : It would happen alarm once device detect the storage device is damaged.

【IP Conflict】: recorder find a device using same IP address as it's own, and triggers the alarm

【Network Abort】 : It would happen alarm once device lose the connection with network.

【Enable】 : tick the check box ✓ means opening, then could set up the following settings.

【Lower Limit】 : this is to set the lower limit value for the function of Storage Space Lack Alarm.

【Screen Tip】 : tick the check box ✓ then it would pop up alarm information dialog in local preview once alarm triggered.

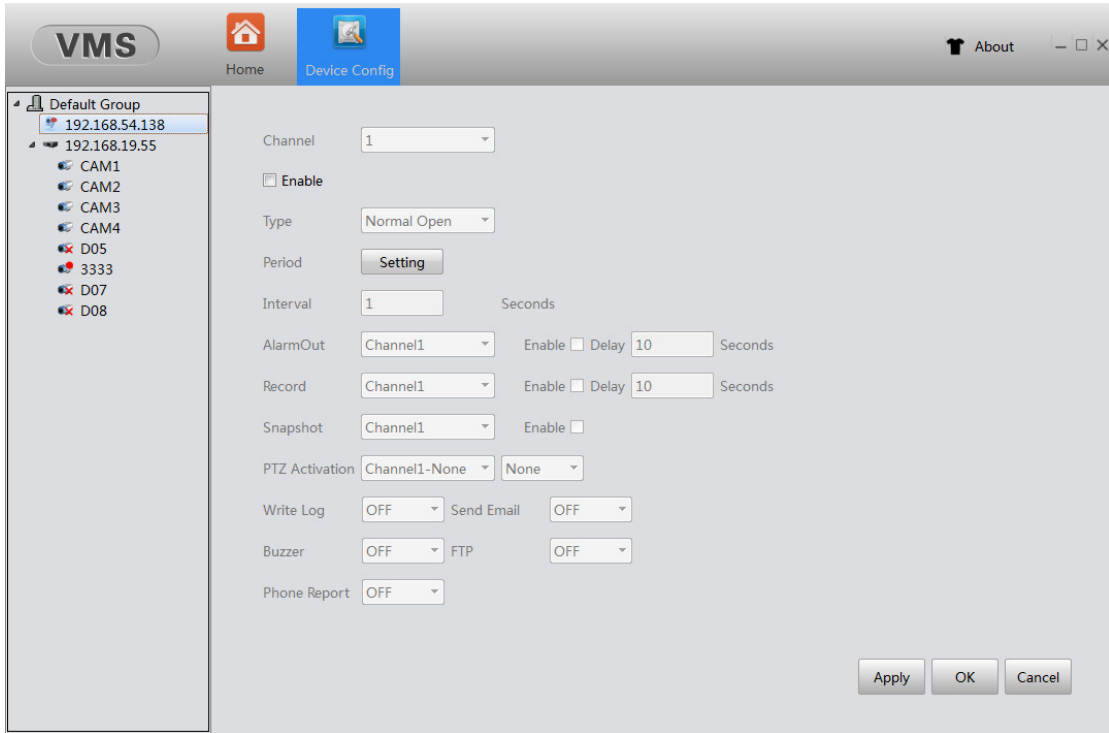

【Buzzer】 : tick the check box ✓ then device local host would emit a beep once it alarm triggered.

【Send Email】 : tick the check box ✓ then it would send a alarm email to designated mailbox once alarm triggered.

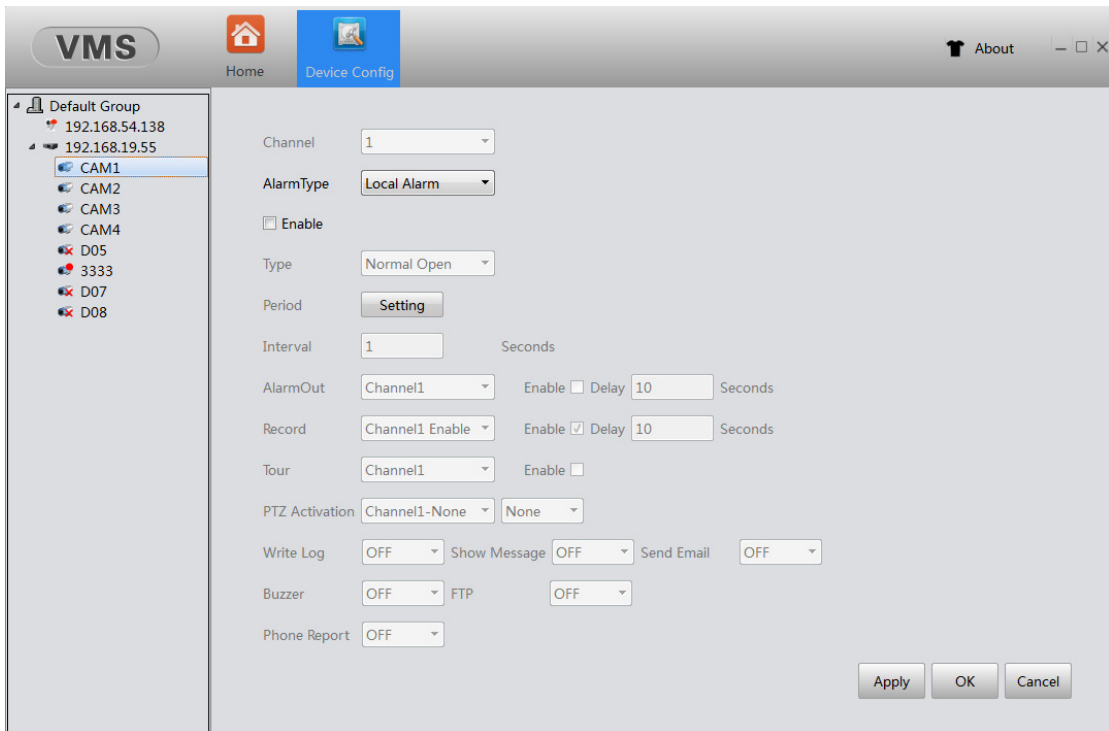

Notes: before using the function of Send Email, please ensure that you have set the email setting in Network and the device is available to connect the SMTP server.

4.1.10. Alarm Input

Click the button of Alarm Input, then could enter the interface accordingly, as shown below:

Alarm Input interface of IPC

Alarm Input interface of DVR

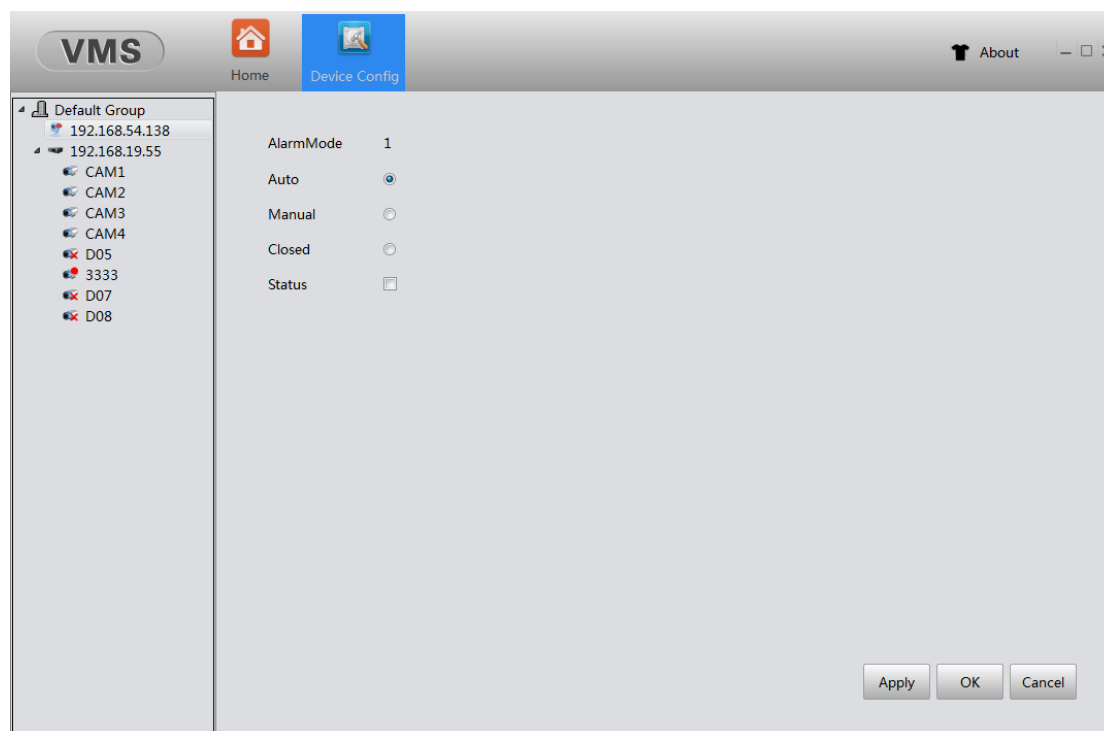

【Type】 External alarm equipment output based on switch information, which means that alarm

status should be same as device alarm type. If the equipment alarm type is normally open, it should be same as the device alarm type. It would pop up error alarm if the type is not same.

Other settings method: refer to Motion Detect.

4.1.11. Alarm Output

Click the button of Alarm Output, it would appear the interface, as shown below:

【Auto】 Click the button ,the alarm output will according to the configuration.

【Manual】 Click the button and the corresponding channel is always has alarm output no matter the channel in any state.

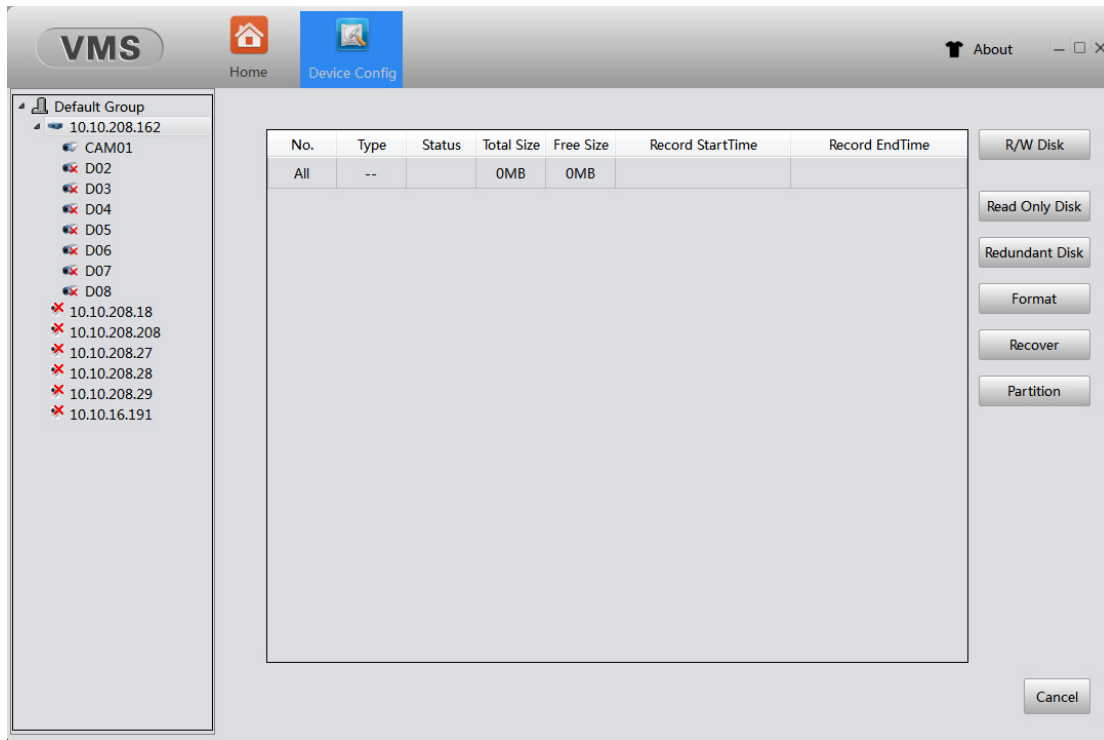

【Closed】 Click the button and the corresponding channel is never has alarm output no matter the channel in any state.

【Status】 Select means has alarm output at present, otherwise means no.

4.1.12. Disk Manager

Click the button of Disk Manager and enter the interface accordingly, as shown below:

This function is used for manage the hard disk which is installed.

【R/W Disk】 after set, this disk or partition could write or read data.

【Read Only Disk】 this disk or partition could only be read, can't written in new records or pictures.

【Redundant Disk】 this disk or partition is used for double backup the video files.

【Format】 select one disk or partition, click this button could format accordingly.

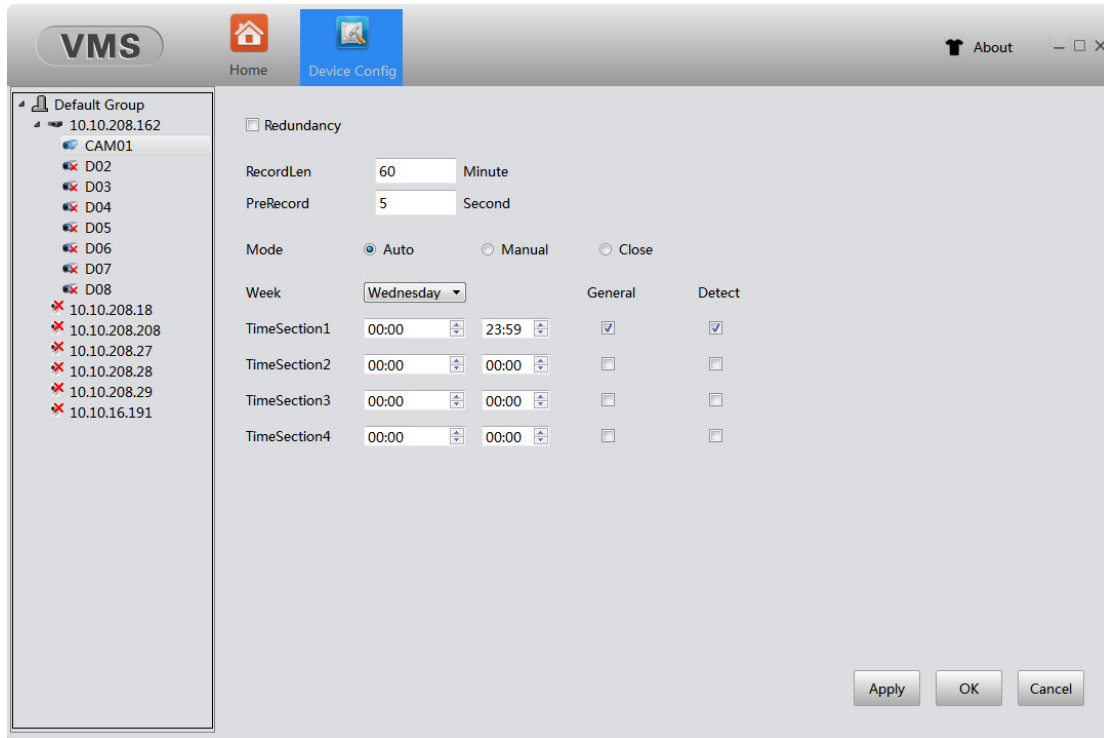

【Recover】 select one disk or partition, click this button could repair the disk or partition which is error.

【Partition】 able to partition the disk which is selected manually

Note: If this device have the ability of snapshot, here would have one snapshot disk for store

4.1.13. Record Config

Click the button of Record Config, then could enter the interface accordingly, as shown below:

【Redundancy】 choose the redundancy function option to implement the file double backup function. Double backup is writing the video files in two hard disks. When you do the double backup, make sure that there are two hard disks installed. One is read-write disk and the other is redundant disk.

【RecordLen】 Set the time length of each video file. 60 minutes is default value.

【PreRecord】 Record 1-30 seconds before the action.(time length is decided by the code stream)

【Mode】 Three record mode: Auto, Manual and Close.

Auto: Record according to the set video type(common, detection and alarm) and time section.

Manual: Click the button and the according channel is recording no matter the channel in any state

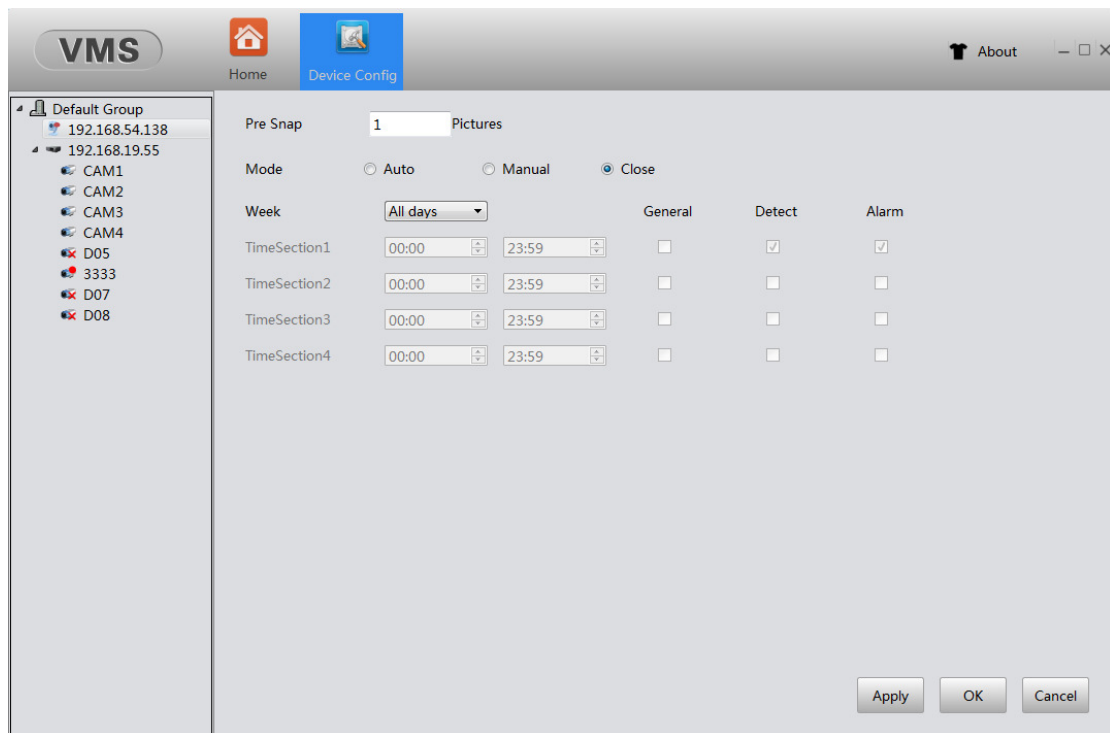

Close: Click the stop button and the according channel stops recording no matter the channel in any state.

【Period】set the time section of common recording, the recording will start only in the set range.

【Record type】 Set recording type: General, Detect .

4.1.14. Snap Config

Click the button of Snap Config, then could enter the interface accordingly, as shown below:

【Pre Snap】once happen alarm, it would snapshots 1-5 pictures before alarm triggered to snapshot, by default it is 2 pictures.

Other settings please refer to Record Config.

4.1.15. User Manager

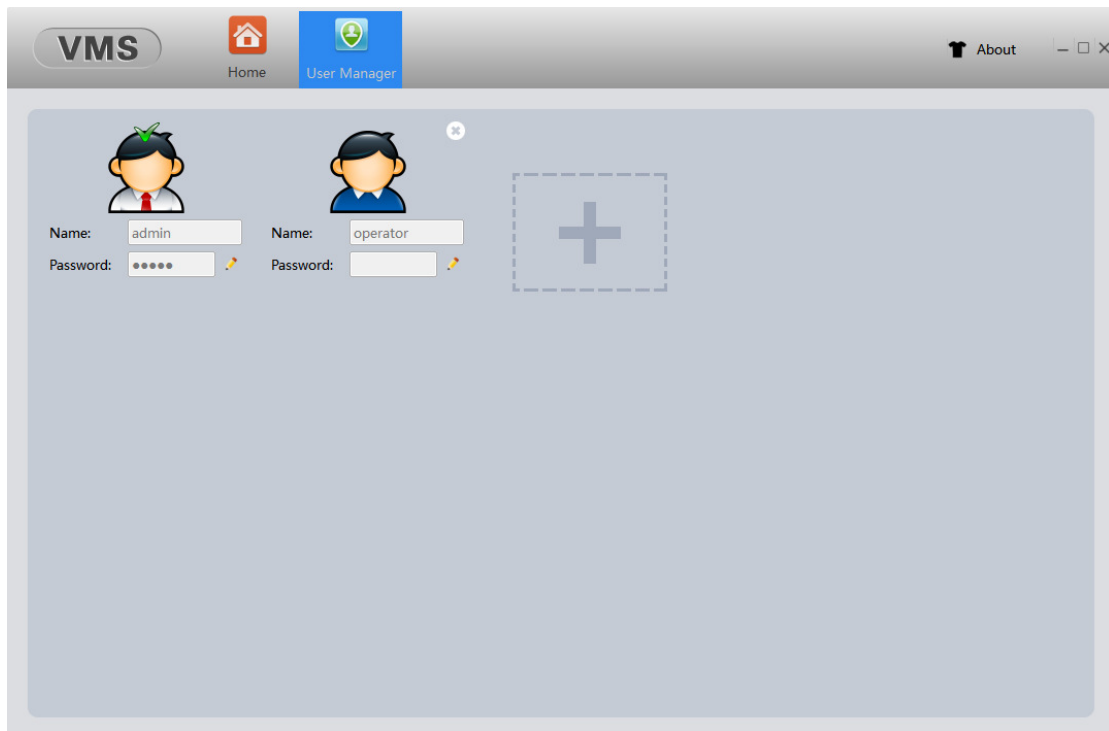

Click the button of User Manager, then enter the interface, as shown below:
