

How to use DeviceManagee

DeviceManagee could be used for updating firmware and customize boot logo.

If it's used for customize boot logo, please note that the format of logo file is JPEG format and the resolution should be 800 x 600.

The specific methods to achieve the following:

1. Searching monitoring device and complete the login:

Please make sure that your PC and the device are in one local area network before next operations, there are two ways to find device, IP Search and Add Device

1). IP Search : Click IP Search, and the infos of monitoring device would be display in devicemanage(No. IP Address, Port, Destribe, Mac Address and CloudID). Click the information of device and modify the network parameters on the right. All are ok for manually modify and Same ToPc. After it, input your device's password on AdminPsw then click the Modify.

J	IP Address	Port	Destribe	Mac Address	CloudID		0 0 0 0
1	10.10.200.65	25001		00:12:12:92:36:43	edf5fb5b41ba0fc	IP Address	0.0.0.0
						Subnet Mask	0.0.0.0
